

Northwest Plumbing, Heating & AC Expands Winter Services for Drain Cleaning and Heating System Maintenance

February 24, 2026

DAVENPORT, Iowa - February 24, 2026 -
Northwest Plumbing, Heating & AC has expanded its winter service offerings to address increased demand for furnace repairs and plumbing maintenance, including specialized drain cleaning services for clogged sinks and heating system diagnostics. The Iowa-based company, which has served the Quad Cities region since 1923, has restructured its service programs and enhanced its diagnostic procedures to help homeowners maintain reliable heating and plumbing systems throughout the colder months.

The expansion includes updated Service Partner Agreements starting at $99 annually for heating systems and $119.40 for plumbing services, providing scheduled maintenance visits, priority service scheduling, and waived after-hours fees. These preventative maintenance plans now cover furnace systems, boilers, geothermal heating, high-efficiency equipment, and comprehensive plumbing inspections.

"As temperatures drop across Iowa and Illinois, we see a significant increase in both emergency heating

repairs and plumbing issues caused by cold weather," said Bill Durand, spokesperson for Northwest Plumbing Heating & AC. "Our expanded winter services and enhanced diagnostic procedures help homeowners avoid costly emergency repairs while maintaining optimal system performance throughout the heating season."

The company has introduced advanced diagnostic equipment and continuous technician training programs to address the full spectrum of winter home comfort challenges. Each technician receives certification in both traditional and high-efficiency system repairs, ensuring comprehensive service capabilities across all heating and plumbing systems. The expanded services include furnace repair and installation, annual heating system checks, humidifier installation, boiler repair and installation, water heater services, drain cleaning, sewer repair, and camera inspection services.

Industry data indicates that regular HVAC inspections can reduce energy costs by up to 20 percent while extending equipment life by several years. The company's technical staff uses advanced diagnostic equipment to perform thorough system evaluations, identifying efficiency issues and potential failure points before they become costly emergencies.

To support customer communication and education, the company has enhanced its digital presence across multiple platforms including Facebook, where it shares maintenance tips and seasonal service reminders. This digital initiative provides homeowners with practical heating system maintenance guidance and plumbing winterization tips, helping them prepare for peak heating months.

The company has also upgraded its online scheduling platform to allow homeowners to book appointments at convenient times, reducing wait times and ensuring prompt service delivery. Flexible financing options through GreenSky help homeowners manage unexpected repair costs or system replacements.

Northwest Plumbing, Heating & AC maintains 24-hour emergency service availability to address urgent heating system failures and plumbing emergencies. The locally owned company continues its century-long tradition of providing comprehensive home comfort solutions including installation, repair, and maintenance services for all major heating, cooling, and plumbing systems throughout the Quad Cities area. This recent news article highlights the company's commitment to evolving service offerings to meet changing customer needs while maintaining the reliability and expertise that has defined their service for over 100 years.
