

Go Industries Expands Custom OEM Manufacturing Services with Advanced Precision Bending Technology

March 03, 2026

Richardson, TX - March 03, 2026 -
Go Industries has expanded its custom manufacturing and fabrication capabilities with the addition of Mitsubishi BB6020 Press Brakes, enabling precision bending services with accuracy levels of ±1 micron. The Texas-based manufacturer's enhanced production capabilities address increasing demand from original equipment manufacturers across automotive, telecommunications, medical equipment, defense, and emerging AI data center infrastructure sectors.

The expansion strengthens the company's position as a comprehensive manufacturing partner for businesses requiring high-precision components and assemblies. The new precision bending technology particularly benefits AI data center infrastructure projects, where server rack specifications demand exact tolerances for proper equipment integration and cooling system efficiency.

"The addition of Mitsubishi BB6020 Press Brakes represents a significant advancement in our fabrication capabilities," said a Go Industries spokesperson. "This technology allows us to deliver the exceptional

accuracy that modern manufacturing demands, particularly for sectors like AI infrastructure and medical equipment where precision is non-negotiable."

Go Industries now offers an extensive range of tube services including CNC bending, rolling, end forming, and sawing. The company's sheet metal capabilities encompass bending, shearing, notching, punching, robotic welding, laser cutting, and plasma cutting technologies. These services complement existing offerings in design and engineering, assembly, packaging, chrome plating, powder coating, and pipe profiling.

The expanded capabilities include certified welding to D1.1, B31.1, and B31.3 standards, ensuring compliance with stringent industry requirements across defense, Department of Transportation, and oil and gas sectors. This certification enables the company to serve as a qualified supplier for critical infrastructure and safety equipment projects.

The modular nature of the company's manufacturing approach allows clients to scale production efficiently, starting with prototype development and expanding to full-scale production as demand grows. This flexibility proves particularly valuable for emerging technology sectors and companies developing specialized equipment for niche markets.

The expansion builds on over four decades of manufacturing expertise, with all engineering and production completed within Texas facilities. The company maintains competitive pricing structures while delivering quick turnaround times on custom fabrication projects, addressing the dual challenges of cost management and speed to market that manufacturers face.

Industries served by the expanded capabilities include automotive, cable and wire, commercial equipment, emergency equipment, defense, Department of Transportation, gas, medical, oil, public safety divisions, sport and fitness, transportation safety equipment, and telecommunications sectors. Each sector benefits from the company's ability to handle complex manufacturing requirements while maintaining consistent quality standards.

Go Industries Inc, established in 1978, has evolved from producing truck accessories and law enforcement equipment to becoming a comprehensive manufacturing partner for businesses across North America. The company maintains Platinum Status with SEMA and operates from its Richardson, Texas facilities, where it combines traditional manufacturing expertise with advanced technology to serve diverse industrial sectors.
