

Keathley Landscaping Announces Enhanced Drainage System Installation Services for North Texas Properties

March 05, 2026

GARLAND, TX - March 05, 2026 - PRESSADVANTAGE -

Keathley Landscaping has announced enhanced drainage system installation services designed to address water management challenges affecting residential and commercial properties throughout North Texas. The announcement follows increased demand for professional drainage solutions as property owners face ongoing challenges from the region's clay soil composition and variable precipitation patterns.

The enhanced services include French drain installation, comprehensive grading solutions, and custom-designed buried drainage pipe systems. Each installation addresses property-specific water management requirements identified through detailed site evaluations that assess soil conditions, existing landscape features, and water flow patterns.

"Property owners in North Texas face specific drainage challenges due to clay soil composition that prevents adequate water absorption," said Logan Keathley, NDS Certified Drainage Contractor and founder of Keathley Landscaping. "Inadequate drainage can result in foundation damage, landscape deterioration, and

standing water that creates additional property maintenance issues. These enhanced services provide comprehensive drainage system designs tailored to each property's unique characteristics."

The drainage system installations incorporate multiple components based on individual property assessments. French drains redirect subsurface water away from structures, while grading modifications establish proper surface water flow. Custom-designed buried drainage pipes manage larger water volumes during heavy precipitation events common to North Texas. These systems work together to prevent water accumulation that can damage foundations, landscapes, and hardscape features.

Keathley Landscaping integrates drainage installations with landscape restoration services including sod installation, custom stonework, retaining walls, and flowerbed borders. The integration ensures drainage functionality while maintaining property aesthetics. Stonework options range from natural flagstone to modern pavers, providing drainage support structures that complement existing landscape designs.

"Drainage system design requires understanding both water management principles and landscape integration," added Keathley. "Each property presents unique topographical features and drainage requirements that demand customized solutions rather than standard installations."

The enhanced drainage services respond to regional weather patterns that create water management challenges for North Texas properties. Heavy rainfall events followed by extended dry periods stress landscapes and create conditions where proper drainage becomes critical for property preservation. Properties without adequate drainage systems experience repeated landscape failures, erosion issues, and potential structural damage.

The announcement addresses growing demand for professional drainage contractors as property owners recognize the importance of proper water management. Many existing properties lack adequate drainage infrastructure, having been developed without consideration for long-term water management needs. Retrofit installations now provide these properties with drainage systems that protect both landscape investments and structural integrity.

Keathley Landscaping has provided landscaping and drainage services throughout the Dallas-Fort Worth metroplex since 2002. As an NDS Certified Drainage Contractor, the company maintains industry standards for drainage system design and installation. The company serves Dallas, Garland, Wylie, Plano, and surrounding communities with comprehensive landscaping services including landscape design and installation, outdoor kitchen construction, patio covers, fence repair and installation, tree services, and landscape lighting systems. The enhanced drainage services complement these existing offerings, providing

property owners with comprehensive landscape and water management solutions from a single contractor.
