

Keathley Landscaping Introduces Comprehensive Yard Drainage Solutions for Texas Properties

March 10, 2026

GARLAND, TX - March 10, 2026 -
Keathley Landscaping has introduced comprehensive yard drainage solutions designed to address water management challenges affecting residential properties throughout North Texas. The introduction responds to increased property damage from inadequate drainage systems across the Dallas-Fort Worth metroplex.

The comprehensive solutions include French drain installation, grading services, and custom-designed buried drainage pipe systems. Each system is engineered to address specific property characteristics, soil conditions, and water flow patterns that contribute to flooding and foundation damage in North Texas properties.

The company's drainage installations incorporate sod services and custom stonework to restore landscapes following drainage system implementation. This integrated approach addresses both water management requirements and landscape restoration needs for properties experiencing drainage failures.

"Property owners throughout North Texas are experiencing significant drainage challenges that require professional intervention," said Logan Keathley, NDS Certified Drainage Contractor and founder of Keathley Landscaping. "Our comprehensive approach identifies the source of drainage problems and implements solutions that protect both landscapes and home foundations from water damage."

The introduction follows recent weather patterns that have exposed drainage vulnerabilities in residential and commercial properties across the region. Heavy clay soils common to North Texas prevent proper water absorption, creating conditions that damage landscapes and threaten structural foundations.

Keathley Landscaping conducts property evaluations to assess existing drainage conditions, soil composition, and water accumulation patterns before designing drainage systems. The evaluation process determines appropriate drainage solutions based on property-specific challenges and existing landscape features.

The drainage solutions incorporate hardscape elements including retaining walls, decorative borders, and paver installations. These features manage water flow while creating functional outdoor spaces that complement drainage system installations. The company's stonework services range from natural flagstone installations to modern paver systems, each selected based on property requirements and water management needs.

Drainage system designs follow NDS (National Drainage System) certification standards for proper implementation and effectiveness. The certification ensures adherence to industry standards for drainage system design, installation, and long-term performance. These standards address critical factors including pipe sizing, slope calculations, and discharge point management.

Property owners in Dallas, Garland, Wylie, Plano, and surrounding communities can access these drainage solutions for both new installations and remediation of existing drainage problems. The services address properties experiencing repeated lawn failures, standing water, and foundation moisture issues.

Keathley Landscaping has provided landscaping and drainage solutions in North Texas since 2002. As an NDS Certified Drainage Contractor, the company specializes in landscape transformations including landscape design and installation, outdoor kitchen construction, patio covers, fence repair and installation, tree services, and landscape lighting systems. The company serves residential and commercial properties throughout the Dallas-Fort Worth metroplex, offering drainage system installations that integrate with comprehensive landscape services.
