

Go Industries Expands OEM Custom Manufacturing and Fabrication Capabilities for Industrial Sectors

March 11, 2026

Richardson, TX - March 11, 2026 -
Go Industries, a Texas-based manufacturer with over 40 years of experience, has expanded its custom manufacturing and fabrication services to meet growing demand from original equipment manufacturers across multiple industrial sectors. The expansion encompasses enhanced precision manufacturing capabilities, including specialized production for AI data center server racks, alongside comprehensive tube and sheet metal fabrication services.

The expanded capabilities address increasing requirements from automotive, telecommunications, medical, defense, and energy sectors for domestic manufacturing partners capable of delivering quality products with competitive pricing and rapid turnaround times. The company's two state-of-the-art facilities in Texas have been equipped with advanced machinery and tooling to support the enhanced service offerings.

"The expansion of our OEM services reflects our commitment to meeting the evolving needs of American manufacturers," said a Go Industries spokesperson. "With supply chain challenges continuing to impact

global manufacturing, we're providing domestic solutions that combine quality, speed, and cost-effectiveness for our industrial partners."

The enhanced tube services include CNC bending, rolling, end forming, and sawing capabilities designed to meet precise specifications for various applications. Sheet metal fabrication capabilities have been expanded to include bending, shearing, notching, punching, robotic welding, laser cutting, and plasma cutting technologies. These additions enable the company to handle complex projects from initial design through final delivery.

Additional specialized services include certified welding to D1.1, B31.1, and B31.3 standards, chrome plating, powder coating, and pipe profiling. The company's high-capacity powder coating line and batch oven provide finishing capabilities for products requiring durable protective coatings. Engineering and design support services complement the manufacturing capabilities, allowing clients to develop custom solutions from concept to completion.

The expansion particularly addresses emerging technology infrastructure needs, with precision manufacturing capabilities for AI data center server racks representing a strategic response to the rapid growth in data center construction and modernization projects across the country. This addition positions the company to serve technology sector clients requiring stringent quality standards and rapid deployment capabilities.

Go Industries serves diverse industries including automotive, cable and wire, commercial equipment, emergency equipment, defense, Department of Transportation, gas, medical, oil, public safety divisions, sport and fitness, transportation safety equipment, and telecommunications sectors. The company also offers private label programs enabling businesses to bring their own branded products to market through established manufacturing expertise.

The expansion comes as many industries seek to strengthen domestic supply chains and reduce dependence on overseas manufacturing. With assembly, packaging, and delivery services integrated into the manufacturing process, clients benefit from streamlined project management and reduced logistics complexity.

Go Industries operates as a division of Longhorn Reels, continuing a tradition of American manufacturing excellence spanning more than four decades. The company's Texas-based operations ensure all products are engineered and built domestically, supporting local employment while maintaining direct oversight of quality control processes throughout production.
