

Encore Data Products Expands Fluent Audio Line and Introduces C-Pen Technology for Enhanced Learning

March 05, 2026

LAFAYETTE, CO - March 05, 2026 -
Encore Data Products, a leading provider of educational technology and audio equipment, announces the expansion of its Fluent Audio product line alongside the introduction of C-Pen reading support technology to its comprehensive catalog of AV solutions for schools, libraries, and businesses.

The Colorado-based company has broadened its Fluent Audio offerings to meet growing demand for dependable communication tools in both educational and professional environments. Fluent Audio systems are widely used for classroom amplification, group instruction, campus communication, and events, and they also support applications beyond schools such as training rooms, guided tours, and business presentations. The expanded product line reflects the increasing need for clear, reliable audio solutions that enhance communication in a variety of settings.

The addition of C-Pen technology marks a significant enhancement to Encore Data Products' assistive technology portfolio. C-Pen devices, which are portable scanning pens that read text aloud, complement the

company's existing audio solutions by providing students with reading difficulties immediate access to written content through audio feedback.

?The integration of C-Pen technology with our expanded audio solutions creates a more comprehensive support system for learners at all levels,? said a company spokesperson for Encore Data Products. ?Educational institutions are looking for integrated solutions that address multiple learning challenges, and this expansion positions us to meet those complex needs effectively.?

The expanded product line reinforces Encore Data Products' position as a comprehensive AV technology provider. Beyond audio equipment, the company supplies a full range of educational technology including document cameras, interactive touchscreens, PA systems, podcasting equipment, and streaming solutions for modern classrooms. The company also provides charge and sync stations, sports communication systems, and tour interpretation systems that serve both educational and commercial markets.

The timing of this expansion aligns with increased focus on accessibility in education. Schools and libraries are investing in technology that ensures all students can access curriculum content regardless of learning differences or disabilities. The combination of traditional headphone systems, advanced audio technology, and reading support tools creates multiple pathways for content delivery.

Encore Data Products has also enhanced its support services to accompany the expanded product offerings. The company provides consultation services to help institutions select appropriate technology combinations for their specific needs, whether implementing language labs, creating podcast studios, or establishing assistive technology centers.

The company maintains its commitment to health and safety by offering sanitization products specifically designed for shared audio equipment, including headphone covers, microphone covers, and electronic sanitizers. This comprehensive approach addresses both the technological and practical needs of educational institutions managing shared equipment.

Based in Lafayette, Colorado, Encore Data Products has established itself as a trusted supplier of educational technology and audio equipment for schools, libraries, and businesses nationwide. The company specializes in providing complete AV solutions, from basic classroom headphones to sophisticated communication systems for sports venues and performance spaces. Through its various product lines, including the Fluent Audio brand, Encore Data Products continues to support improved communication and learning outcomes across educational and professional settings.
