

Go Industries Expands Winch Grille Guards System for Commercial Trucks

March 12, 2026

Richardson, TX - March 12, 2026 -
Go Industries has expanded its commercial-grade winch grille guard offerings with innovative integrated winch systems designed to meet the demanding needs of fleet operators and heavy-duty truck owners across North America.

The expanded product line features modular-style grille guards that serve as a foundation for adding winch carriers and brush guards, addressing the growing demand for versatile front-end protection systems in commercial trucking applications. The enhanced offerings come as fleet operators increasingly seek durable, multi-functional equipment that can withstand challenging work environments while maintaining vehicle functionality.

"Our expanded winch grille guards system represents our commitment to providing commercial truck operators with the most reliable protection available," said a Go Industries spokesperson. "The modular design allows fleet managers to customize their vehicles based on specific operational requirements, whether

they need basic protection or full winch capabilities for recovery operations."

The winch grille guards feature construction from 5/16-inch laser-cut steel uprights combined with 2.5-inch, 16-gauge steel cross tubes, providing substantial protection against impacts and road hazards. The system includes custom heavy-duty mounting brackets engineered for maximum strength and simplified installation, reducing downtime for commercial operators.

The modular approach enables customers to add optional brush guards that complement vehicle aesthetics while creating additional protection for headlight areas from road debris and off-road brush. Optional 9.5 or 16.5 winch carriers can be integrated into the system, providing recovery capabilities essential for work trucks operating in remote locations or challenging terrain.

Beyond the winch grille guard systems, Go Industries maintains its position as a comprehensive supplier of truck accessories, including mud guards by Go Industries, headache racks, bumper replacements, and specialized law enforcement equipment. The company's fabrication capabilities enable custom manufacturing solutions for fleet operators with unique requirements.

The expanded product line addresses multiple vehicle makes and models, including Chevrolet, Dodge Ram, Ford, and GMC trucks. Each component undergoes rigorous testing to ensure compatibility and performance across different truck configurations, from standard pickups to heavy-duty dually models.

All products in the expanded line carry a three-year warranty covering materials, workmanship, and finish, reflecting the company's confidence in its manufacturing processes. The entire product range is manufactured in the United States, supporting domestic fabrication jobs while maintaining strict quality control standards.

Go Industries has served the trucking and law enforcement industries since 1978, developing specialized accessories and protection systems for commercial and government vehicles. Based in Richardson, Texas, the company maintains Platinum Status with SEMA, recognizing its commitment to quality and innovation in the automotive aftermarket industry. The company offers comprehensive truck protection solutions ranging from front and rear-end accessories to custom manufacturing services for specialized applications.
