Beary Landscaping Announces Spring Cleanup Program for Commercial and Residential Properties

February 26, 2026

LOCKPORT, IL - February 26, 2026 -
Beary Landscaping, a full-service landscaping company serving commercial, multi-unit facilities throughout the Chicagoland area, is hard to work keeping clients satisfied with Spring Clean Up Services. This program is now open for scheduling and is designed to address the post-winter condition of outdoor spaces across the range of property types that Beary serves, from large commercial campuses and multi-family complexes.

Spring cleanup represents one of the more consequential seasonal service intervals in the Illinois landscape maintenance calendar. The combination of freeze-thaw cycles, heavy precipitation, and extended periods of snow coverage that characterize Illinois winters typically leaves outdoor spaces requiring systematic restoration before new growth cycles begin. Beary Landscaping's Spring Clean Up is structured to address these conditions through a coordinated sequence of services that prepare turf, planting beds, trees, and hardscape areas for the growing season.

The spring cleanup services encompasses a range of activities that Beary Landscaping delivers as part of its broader landscape maintenance offerings. Core activities include removal of accumulated winter debris, dethatching and aeration of lawn areas where soil compaction has developed over the dormant season, bed

edging along planting areas to reestablish clean definition, and application of mulch to retain soil moisture and moderate ground temperature as warming begins. The company also conducts pruning assessments during spring visits to identify winter damage to shrubs and ornamental plantings, addressing broken or diseased growth before the active growing season begins.

"Spring is the period when the decisions made about landscape preparation have the most lasting impact on how a property performs through the rest of the year," said a company representative from Beary Landscaping. "Beds that carry over winter debris, or turf that doesn't receive the right nutrition at the right time will underperform for months, and we structure our spring program to address all of those factors in a coordinated way."

For commercial and multi-family property clients, Beary Landscaping coordinates spring cleanup scheduling to minimize disruption to property operations and tenant activity. The company currently serves apartment complexes, office parks, retail properties, homeowner associations, and municipal facilities across its service footprint, which includes Lockport, Arlington Heights, Aurora, Brookfield, and surrounding communities. Property managers working with Beary Landscaping receive a single point of contact for scheduling and communication, a service model the company has maintained as a standard throughout its 40 years of operation.

The spring cleanup program also functions as a natural transition point for clients beginning new maintenance agreements with Beary Landscaping for the 2026 season. The company's ongoing landscape maintenance services include weekly mowing, fertilization programs, irrigationsystem activation and inspection, seasonal planting rotations, and tree and arbor care, all of which follow naturally from spring preparation work. Clients beginning a maintenance relationship in the spring benefit from a baseline assessment conducted during the cleanup process that informs the maintenance plan for the full growing season.

Beary Landscaping has operated in the Chicagoland landscaping market for more than 40 years and employs more than 250 trained staff members across its service areas. The company's residential landscape construction division also accepts spring consultations for clients pursuing larger installation projects including patios, outdoor living features, landscape lighting, water features, and structural plantings, with design and installation work scheduled through the spring and summer months.

Property managers, homeowners, and facilities directors seeking to schedule spring cleanup services with Beary Landscaping are encouraged to contact the company early in the season, as scheduling capacity for spring preparation work fills in advance of peak demand. More information is available at
