

Texas Certified Restoration Completes Major Fire Damage Project in Cameron Community

March 25, 2026

ROUND ROCK, TX - March 25, 2026 -
Texas Certified Restoration recently completed a comprehensive fire damage restoration project for a Cameron, Texas residence that sustained extensive fire and smoke damage throughout the property. The restoration project demonstrated the company's full-service capabilities in handling complex fire damage scenarios requiring complete structural rehabilitation.

The Cameron residence suffered significant damage when a fire spread through multiple rooms, leaving behind extensive smoke damage, water damage from firefighting efforts, and compromised structural elements. The restoration team mobilized immediately to secure the property and begin the recovery process.

"Fire damage extends far beyond what's immediately visible, affecting the structural integrity, air quality, and safety of the entire property," said Tiffany King, Project Director at Texas Certified Restoration. "Our approach addresses every aspect of fire damage, from initial emergency response through complete

reconstruction, ensuring homeowners can return to a fully restored and safe living environment."

The restoration process began with emergency board-up services to secure the property and prevent further damage from weather exposure. The team then conducted a thorough assessment to document all damage for insurance purposes and develop a comprehensive restoration plan.

Debris removal and cleanup followed, with specialized attention to hazardous materials and damaged structural components. The team employed advanced smoke odor mitigation techniques, including thermal fogging and ozone treatment, to eliminate persistent smoke odors that had penetrated walls, carpets, and furnishings throughout the home.

Structural drying proved essential as water from firefighting efforts had saturated walls, floors, and ceiling materials. Using industrial-grade dehumidifiers and air movers, the restoration team prevented secondary damage from mold growth while preparing the structure for reconstruction.

The reconstruction phase involved replacing damaged drywall, flooring, and roofing materials, along with complete repainting and refinishing of affected areas. The team coordinated closely with the homeowner's insurance provider throughout the process, managing documentation and ensuring coverage for all necessary restoration work.

Fire damage restoration Austin TX properties require specialized expertise due to the complex nature of fire and smoke damage. The Cameron project showcased the importance of professional restoration services in returning properties to pre-loss condition while addressing both visible damage and hidden hazards.

The successful completion of this project reinforces the critical need for immediate professional intervention following fire damage incidents. Delays in addressing fire and smoke damage can lead to permanent staining, persistent odors, and structural deterioration that becomes increasingly difficult and expensive to remediate.

Texas Certified Restoration maintains IICRC certification and serves residential and commercial properties throughout Greater Austin and surrounding communities including Cameron, Round Rock, Cedar Park, Georgetown, and Leander. The company specializes in comprehensive restoration services including water damage restoration, mold remediation, storm damage repair, and biohazard cleanup. With a focus on rapid response and thorough restoration, the company works directly with insurance providers to streamline the claims process and minimize disruption for property owners facing disaster recovery situations.
