

Mindmachines.com Announces Complete ROSHI Mind Device Collection with Final pROSHI 3 Emulation

March 05, 2026

Dallas, Texas - March 05, 2026 -
Mindmachines.com has announced the completion of its ROSHIwave product line with the addition of the pROSHI 3 emulation, marking the first time this previously unreleased model has been made available to the public. The upgrade represents the culmination of a multi-year effort to preserve and democratize personal ROSHI brainwave entrainment technology.

The pROSHI 3 emulation adds several new features to the ROSHIwave platform, including classic default pROSHI 3 modes in both positive and negative phases, 3D modes, HD mode, new XD modes utilizing pROSHI 3 modeling, and a sequential mode containing all five ROSHI models. The upgrade also introduces experimental protocols developed for advanced brainwave entrainment applications.

"The completion of the ROSHIwave collection means that for the first time, users have access to the entire spectrum of personal ROSHI technology in a single device," said Fred Williams, Director of Product Development at Mindmachines.com. "What once required purchasing multiple devices at premium prices in

the secondary market can now be accessed through one comprehensive platform at a fraction of the historical cost."

The ROSHI mind device uses a process called Dynamic Neuro-Activation through photostimulation, sending calibrated flickering light through the eyes to help normalize brainwave patterns. The technology aims to guide users to meditative states similar to those achieved by experienced meditation practitioners, potentially helping individuals manage stress and enhance mental clarity.

Since its initial launch in 2019, the ROSHIwave has undergone extensive testing and validation within the clinical community. Dr. Victoria Ibric and other researchers have confirmed the device's accuracy in reproducing personal ROSHI technology protocols. The platform has evolved through multiple iterations, with each upgrade adding new models and modes based on user feedback and clinical research.

The significance of preserving ROSHI technology extends beyond individual users to the clinical and research communities. Prior to the ROSHIwave's development, older pROSHI devices commanded prices two to three times their original retail value in secondary markets, limiting access for researchers and practitioners. The consolidated platform now makes all five personal ROSHI models available at a cost lower than the original price of a single unit.

The device operates on the principle of brainwave disentrainment, a process designed to free the mind from repetitive thought patterns often referred to in Buddhist philosophy as the "monkey mind." Through controlled light stimulation, the technology aims to guide users toward normalized brainwave states associated with deep meditation and mental clarity.

Mindmachines.com serves as an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, and meditation machines. The company is the worldwide distributor of the ROSHIwave self-meditation device. The ROSHIwave self-meditation machine is currently available through the mindmachines.com website.
