Appliance Depot Highlights Sustainable Use of Used Appliance Parts for Home Maintenance

March 04, 2026

INVER GROVE HEIGHTS, MN - March 04, 2026 - PRESSADVANTAGE -

Appliance Depot has released new insights on how used appliance parts contribute to extending the life of household appliances while supporting environmental sustainability. This initiative addresses the growing concern over electronic waste and resource consumption in the appliance industry.

The publication details the advantages of opting for used parts in repairs, drawing attention to the reduction of landfill waste. Appliances often end up as e-waste, with millions of tonnes generated annually worldwide. By reusing functional components from salvaged units, consumers can prevent the premature disposal of viable materials. This practice keeps valuable parts in circulation, minimizing the environmental impact associated with discarding large household items like refrigerators and washing machines.

Resource conservation forms another key aspect of this approach. Manufacturing new appliance parts requires extracting metals, plastics, and other materials, which depletes natural reserves and harms ecosystems through mining processes. Reusing existing components reduces the need for new production, preserving raw materials and lowering the overall demand on global resources. This method aligns with broader efforts to promote a circular economy, where products and materials are kept in use for as long as

possible.

The insights also emphasize the role of used parts in lowering carbon emissions. Producing new components involves significant energy use and transportation, contributing to a substantial carbon footprint. Repairs using reused parts avoid these emissions, potentially reducing climate impacts by a notable margin. Extending the lifespan of appliances through such repairs often proves more environmentally beneficial than replacing them entirely, even when newer models offer improved energy efficiency during operation.

Cost savings represent an additional benefit, with used parts often available at a fraction of the price of new ones. This makes sustainable repair options accessible to a wider range of households, encouraging maintenance over replacement. Local salvage operations and repair shops benefit from this trend, fostering community-based sustainability practices.

Ronald Zeien, owner of Appliance Depot, stated, "We know our products backwards and forwards, and we're able to share that knowledge with our customers. By offering used appliance parts, we help them find affordable fixes that keep appliances running longer."

Mike Larson, a representative at Appliance Depot, added, "The recycling of household items has really gone up with public education. Using used parts is a natural extension of that, allowing people to repair rather than discard."

The focus on used parts ties into Appliance Depot's longstanding commitment to recycling. Since 1988, the company has operated a disposal service that handles appliances, electronics, and other items, diverting them from landfills. This service includes drop-offs and pickups, responding to increased public awareness of environmental issues.

The business evolution reflects a dedication to customer needs. Starting with a focus on parts and repairs, Appliance Depot has grown to include a wide inventory of new, used, and scratch-and-dent appliances. The knowledgeable staff assists in diagnosing issues and recommending appropriate solutions, often suggesting simple part replacements to avoid unnecessary purchases.

This emphasis on sustainability comes amid rising global e-waste figures, highlighting the need for practical solutions in everyday home maintenance. By providing access to quality used parts, Appliance Depot supports consumers in making environmentally responsible choices without compromising on functionality.

Appliance Depot continues to serve the Twin Cities area with a range of options for appliance needs. The inventory includes parts for major categories such as refrigerators, washers, dryers, ovens, dishwashers, and more. This comprehensive approach ensures that repairs can be completed efficiently, contributing to longer

appliance lifespans.

Founded in 1955 as a family-owned business, Appliance Depot remains operated by the Zeien family, with multiple generations involved. The company has adapted to industry changes, incorporating recycling services and expanding offerings to meet community demands. Located in Inver Grove Heights, Minnesota, it has earned recognition for its customer service and contributions to local sustainability efforts
