

Conservatory Craftsmen Releases Guide to Best Plants for Four-Season Greenhouses in the Midwest

March 04, 2026

March 04, 2026 - PRESSADVANTAGE -

Conservatory Craftsmen has released a new educational guide titled "Best Plants for a Four-Season Greenhouse in the Midwest," providing recommendations for plant varieties that thrive throughout the year in the region's variable weather conditions. The guide addresses selections for citrus and tropical fruits, fragrant blooms, and foliage plants, along with tips on integrating smart technology for maintenance.

The Midwest presents unique challenges for greenhouse owners, with humid summers and harsh winters that can affect plant health. The guide outlines how a well-designed four-season greenhouse, equipped with climate control systems, creates a stable environment for diverse flora. Recommendations include Meyer lemons, key limes, and dwarf bananas for citrus and tropical fruits, which benefit from consistent light and humidity. These plants add color and fragrance during colder months, offering fresh harvests even in sub-zero temperatures outside.

For fragrant blooms, the guide suggests orchids, jasmine, and gardenias. Orchids perform well in controlled humidity settings, while jasmine can be trained along structures for added visual interest. Gardenias provide classic white flowers that prefer steady warmth, enhancing the sensory experience of the space. These

selections ensure blooms at various times, contributing to year-round appeal and supporting well-being during extended indoor periods.

Foliage plants receive attention as well, with suggestions for fiddle leaf figs, ferns such as Boston and bird's nest varieties, and palms. Fiddle leaf figs appreciate bright, indirect light from high-quality glazing, while ferns thrive in humidified air. Palms add height and a sense of grandeur, functioning as natural air purifiers. The guide emphasizes how these plants create a lush, forest-like atmosphere within the greenhouse.

A significant portion of the guide focuses on managing plant care through smart technology. Features like automated humidifiers, temperature sensors, and watering systems allow for precise control. Remote monitoring via video cameras and smartphone applications enables adjustments to blinds, heaters, or ventilation in response to changing weather. Automated ceiling fans help prevent air stagnation, ensuring optimal conditions for plant growth.

As experienced conservatory builders, Conservatory Craftsmen integrates these technologies into custom designs. Structures incorporate automated roof vents, shades, and blinds made from materials like pineoleum. Additional elements include Gothic arch muntins, steel substructure columns wrapped in wood, in-floor heating, and custom interior trim packages. Beveled glass crystals enhance views of natural phenomena, such as rainbows or sunsets, adding to the functionality of the space.

The company constructs luxury conservatories, greenhouses, and orangeries that blend craftsmanship with innovation. Projects demonstrate this approach, including the Lake of the Isles Conservatory in Minnesota, which features restored elements, and the Excelsior Conservatory Restoration, preserving historical details. A private botanical garden in Tucson, Arizona, showcases extensive plant collections in a controlled setting, while a conservatory spa in North Oaks, Minnesota, combines relaxation spaces with greenhouse functionality.

Other notable installations include a mahogany masterpiece in central Wisconsin, emphasizing custom woodwork, and an Oshkosh, Wisconsin, pool cover conservatory that integrates aquatic and botanical elements. A conservatory near Jackson, Wyoming, adapts to mountainous conditions, and one in Greenwich, Connecticut, highlights East Coast architectural styles. A project in Indianapolis, Indiana, demonstrates urban applications of these structures.

Jim Hewitt, owner of Conservatory Craftsmen, stated, "This guide reflects our commitment to helping clients maximize the potential of their greenhouses by selecting plants that align with Midwest climates and leveraging smart controls for effortless maintenance."

Evan Cohoe, vice president of sales and marketing, added, "By sharing these insights, we aim to support

greenhouse owners in creating sustainable, vibrant spaces that endure seasonal changes."

The guide draws from the company's expertise in building structures that support diverse plant life. Additional blog content from Conservatory Craftsmen covers related topics, such as ventilation systems in conservatories, questions to ask installation companies, and the business potential of event venue conservatories. Entries also explore private botanical gardens as home upgrades, the value of conservatory additions, and design processes for orangeries.

Further posts address retractable roofs for restaurants, indoor private gardens, sunroom design, sustainable garden rooms, and creative uses for conservatory home offices. These resources provide comprehensive information for those considering or maintaining such structures.

Founded in 1988 by Jim Hewitt in Minneapolis, Minnesota, Conservatory Craftsmen specializes in the design and construction of luxury conservatories, greenhouses, and orangeries. The company maintains operations in Stonehouse, England, and emphasizes personalized client relationships, quality workmanship, and ongoing support for conservatory needs.
