

Mindmachines.com Introduces Complete ROSHIwave Meditation Device Platform with pROSHI 3 Emulation

March 13, 2026

Dallas, Texas - March 13, 2026 -

Mindmachines.com has announced the completion of its ROSHIwave product line with the addition of the pROSHI 3 emulation, marking the first public availability of this previously unreleased model. The expansion represents a significant development in the company's brainwave disentrainment technology platform, which uses photostimulation to help users achieve meditative states.

The pROSHI 3 emulation introduces several new features to the ROSHIwave platform, including classic default pROSHI 3 modes in both positive and negative phases, 3D modes, HD mode, new XD modes utilizing pROSHI 3 modeling, and a sequential mode containing all five ROSHI models. The development follows extensive clinical testing and user feedback gathered since the ROSHIwave platform initially launched in 2019.

"The completion of our ROSHIwave platform with the pROSHI 3 emulation represents years of research and refinement in brainwave disentrainment protocols," said Fred Williams, Director of Product Development at

Mindmachines.com. "This technology provides users with a comprehensive set of tools for achieving deep meditative states that might otherwise require decades of dedicated practice to attain."

The ROSHIwave system operates through Dynamic Neuro-Activation, a proprietary process that uses calibrated flickering light delivered through RGB LED glasses to influence brainwave frequencies. Unlike traditional entrainment methods that synchronize the brain to specific frequencies, the disentrainment approach works by dispersing repetitive mental patterns, often referred to in Buddhist philosophy as the "monkey mind."

The enhanced platform serves both personal wellness applications and professional research environments. Users have reported experiencing enhanced mental clarity, stress reduction, and improved meditation practices through regular use of the device. The technology provides a non-invasive approach to achieving normalized brainwave states associated with deep meditation and mental clarity.

The pROSHI 3 emulation adds to the existing ROSHIwave capabilities, which include modified navigation systems and expanded protocol options for stress management, learning enhancement, and behavioral modification. The device uses photostimulation to send specially calibrated light through the eyes and into the brain, helping to free the mind from unhealthy cyclical patterns.

The ROSHIwave platform has been described as a digital compass for the brain, guiding users to meditative states beyond the perception of time without conscious effort. The system aims to help users attain brainwave patterns similar to those of experienced meditation practitioners in sessions as brief as 15 minutes.

Mindmachines.com serves as an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, and meditation machines. The company is the worldwide distributor of the ROSHIwave self-meditation device. The ROSHIwave self-meditation machine, including the new pROSHI 3 emulation, is currently available through the mindmachines.com website.
