

Freight Management Inc Marks 40 Years Supporting Businesses in an Evolving Logistics Environment

March 09, 2026

ITASCA, IL - March 09, 2026 -

Freight Management Inc., a U.S.-based freight brokerage with more than 40 years of experience in freight management and logistics coordination, continues to support businesses navigating increasingly complex supply chain operations across the United States. The company works with retailers, manufacturers, and enterprise shippers to coordinate freight movement and improve operational visibility throughout modern transportation networks.

According to industry reports, supply chains have become significantly more complex over the past decade as global trade, transportation costs, and regulatory pressures have evolved. Rising tariffs, shifting trade policies, and volatile freight markets have forced many businesses to reevaluate how shipments move through ports, rail systems, and domestic transportation networks.

Industry observers note that companies are increasingly prioritizing logistics partners capable of providing clear insight into freight costs while maintaining visibility into how shipments move across interconnected

transportation systems. Freight transportation today often involves multiple transfer points, including international ports, rail terminals, inland ramps, and final-mile delivery networks.

Managing freight across these interconnected systems requires coordination between carriers, rail providers, port operators, distribution centers, and local delivery networks. For many organizations, maintaining consistent oversight of shipment movement and associated freight charges across these networks can be difficult without dedicated logistics management.

Freight Management Inc. focuses on logistics coordination and freight brokerage designed to help organizations better understand and manage the operational side of transportation. By working closely with shippers and freight forwarders, the company supports freight movement through major U.S. ports, rail systems, and inland distribution routes while helping businesses maintain visibility into freight activity across their transportation networks. Additional information about the company can be found on LinkedIn.

?Supply chains today require a much higher level of coordination and transparency than they did even a decade ago,? said Bob Mayo, CEO of Freight Management Inc. ?Businesses want to understand where their freight is, how it moves through ports, rails, and distribution networks, and what the true costs are at every step of the process.?

Many businesses are also seeking greater transparency into freight charges as transportation costs fluctuate due to tariffs, fuel pricing, port congestion, and shifting global trade patterns. Without clear oversight of freight activity across the supply chain, companies may encounter hidden operational costs, delays, or inefficiencies that affect delivery timelines and overall logistics performance.

At the same time, delivery expectations across many industries have changed significantly. Businesses increasingly operate in environments where customers expect rapid fulfillment, including same-day or next-day delivery, along with more controlled delivery experiences for high-value shipments. The continued expansion of e-commerce has accelerated these expectations as retailers compete to deliver goods faster and more reliably to customers.

Rising return volumes have also become an operational challenge across the retail and e-commerce sectors. Industry reports indicate that online return rates have increased significantly in recent years, creating additional transportation demands and logistical costs for businesses already managing complex distribution networks.

For more than four decades, Freight Management Inc. has worked with businesses seeking to reduce

inefficiencies, improve supply chain visibility, and maintain consistent delivery performance through experienced logistics oversight and technology-enabled transportation management.
