

Miramont Cabinetry Unveils Advanced 3D Design Technology for Kitchen Cabinets

March 12, 2026

PEACHTREE CORNERS, GA - March 12, 2026 - PRESSADVANTAGE -

Miramont Cabinetry, a custom cabinet manufacturer serving the Atlanta metropolitan area, has introduced advanced 3D design visualization technology to enhance the custom cabinetry planning process for homeowners throughout North Atlanta suburbs. The technology integration allows clients to preview detailed renderings of their kitchen and bathroom renovations before construction begins.

The implementation of this design technology represents a significant advancement in how homeowners approach cabinet selection and space planning. The system enables precise visualization of Premium Kitchen Cabinets within existing room dimensions, providing accurate representations of how different styles, finishes, and configurations will appear in the actual space.

"The integration of 3D visualization technology transforms the traditional cabinet selection process by eliminating uncertainty and allowing homeowners to make confident decisions about their investments," said Arif Zarars?z, Vice President of Miramont Cabinetry. "This technology ensures that every cabinet design

aligns perfectly with both the aesthetic vision and functional requirements of each unique space."

The technology platform incorporates professional measurement data with comprehensive design libraries featuring both European and American-style cabinetry options. Homeowners can explore various configurations including traditional Shaker designs and contemporary European frameless constructions, adjusting elements such as door styles, hardware selections, and interior accessories in real-time.

Beyond kitchen applications, the visualization capabilities extend to bathroom vanities, living space storage solutions, pantry organizations, mudroom configurations, and utility room designs. Each rendering accounts for existing architectural elements, ensuring proposed installations integrate seamlessly with current home structures.

The design process begins with professional on-site measurements conducted by certified technicians who document precise room dimensions and identify potential installation considerations. This data feeds directly into the visualization platform, creating accurate base models for design development.

Miramont Cabinetry maintains an extensive selection of materials and finishes within the design system, including multiple wood species, contemporary laminates, and specialty finishes. The platform displays how different materials respond to various lighting conditions, helping homeowners understand how their selections will appear throughout different times of day.

The company's commitment to precision extends through the entire project lifecycle. Following design approval, each cabinet undergoes custom fabrication using all-plywood construction with dovetail assembly, soft-closing hinges, and full-extension drawer glides. A 14-step finishing process utilizing Sherwin-Williams coatings ensures consistent quality and durability across all products.

Interior designers and luxury home builders throughout Gwinnett County have embraced the technology as a communication tool for client consultations. The ability to generate multiple design iterations quickly facilitates productive discussions about style preferences, storage requirements, and budget considerations.

The visualization technology also supports real estate professionals working with property renovations and home staging projects. Accurate renderings help establish realistic project timelines and budgets while demonstrating potential property value improvements to stakeholders.

Miramont Cabinetry operates from its Peachtree Corners facility, providing custom cabinetry solutions throughout the Georgia area including Norcross, Johns Creek, Duluth, Alpharetta, Roswell, Dunwoody, and

Sandy Springs. The company specializes in comprehensive cabinetry projects ranging from complete kitchen renovations to bathroom vanities and whole-home organization systems, offering both framed and frameless construction options to accommodate diverse design preferences and architectural styles.
