

Adam Berry SEO Consultant Reveals Global Search Data Analysis on AI Tool Adoption Patterns

March 10, 2026

Manchester, New Hampshire - March 10, 2026 - PRESSADVANTAGE -

Adam Berry SEO, a Manchester-based search optimization consultancy, has released findings from a comprehensive analysis of global search demand data examining how interest in major generative AI tools varies across different countries. The research, conducted by SEO consultant Adam Berry, compared international search patterns for three widely used AI platforms: ChatGPT, Google Gemini, and Claude AI.

The analysis reveals significant regional variations in AI platform preferences and adoption rates. For ChatGPT searches, the United States leads with approximately 28 million monthly searches, followed by Vietnam with around 24 million searches and India with roughly 20 million. Indonesia also demonstrates strong interest with approximately 19 million monthly searches, while several European countries including France, Spain, and Italy show comparatively lower search volumes.

The research identified notably different patterns when examining other AI platforms. Claude AI search data shows India ranking first globally with approximately 846,000 monthly searches, followed by the United

States with around 812,000 searches and Indonesia with roughly 635,000 searches. Google's Gemini platform displays yet another regional distribution, with the United States generating around 6.8 million monthly searches, Brazil approximately 6.3 million, and India roughly 4.9 million.

"The variation in search demand across countries reflects fundamental differences in technology adoption rates, local digital ecosystems, and varying levels of awareness about generative AI tools," said Adam Berry, SEO Consultant at Adam Berry SEO. "Indonesia's consistent appearance among top-ranking countries for all three platforms suggests particularly strong interest in generative AI technologies in Southeast Asia, while the dominance of different countries for different platforms indicates that regional preferences play a significant role in AI tool adoption."

The analysis highlights how certain countries appear consistently across multiple platforms. Indonesia ranks among the top countries searching for ChatGPT, Gemini, and Claude AI, suggesting robust interest in generative AI technologies across the region. Meanwhile, the United States maintains high search volumes across all platforms, though its relative ranking varies by tool.

These findings emerge as businesses worldwide increasingly integrate AI tools into their operations. The data suggests that while global interest in AI tools continues to grow rapidly, different regions demonstrate distinct preferences for specific platforms. This regional variation has implications for technology companies developing AI tools and businesses considering international AI strategy implementation.

The research methodology involved analyzing search volume data from multiple countries to identify patterns in AI tool interest. The findings provide insights into the current state of global AI adoption and highlight the importance of understanding regional differences in technology preferences.

Adam Berry SEO specializes in providing bespoke SEO solutions to businesses of all sizes. The consultancy offers comprehensive services including SEO audits, keyword research, content marketing, link acquisition, YouTube SEO, website migration support, and Google penalty recovery. With extensive experience working across various sectors including technology, property, retail, and recruitment, the company combines technical expertise with deep understanding of search behavior patterns.
