

Go Industries Launches Enhanced Custom Manufacturing and Fabrication Services for AI Data Center Infrastructure

March 17, 2026

Richardson, TX - March 17, 2026 -
Go Industries, a Texas-based manufacturer, has launched enhanced custom manufacturing and fabrication services specifically designed to meet the growing demands of AI data center infrastructure and other technology sectors. The company has added precision manufacturing capabilities for AI data center server racks alongside expanded tube and sheet metal services.

The launch comes as demand for specialized fabrication services increases across automotive, telecommunications, medical equipment, defense, and technology infrastructure sectors. The company's Texas facilities now offer expanded capabilities including CNC tube bending, rolling, end forming, and sawing, as well as robotic welding, laser cutting, and plasma cutting for sheet metal operations.

"The emergence of AI data center infrastructure has created new requirements for precision manufacturing," said a Go Industries representative. "Our enhanced services address these needs while maintaining the

quick turnaround times and competitive pricing that OEM partners require."

The expanded service portfolio includes certified welding to D1.1, B31.1, and B31.3 standards, chrome plating, powder coating, pipe profiling, and complete assembly and packaging solutions. The company operates a high-capacity powder coating line and batch oven for finishing products, along with an extensive inventory of tooling and machinery for varying order volumes.

Go Industries now serves automotive manufacturers, telecommunications companies, medical equipment producers, defense contractors, Department of Transportation suppliers, and public safety divisions. Additional sectors include commercial equipment manufacturers, emergency equipment providers, oil and gas companies, sports and fitness equipment manufacturers, and transportation safety equipment suppliers.

The company's design and engineering support services assist OEM partners in optimizing products for manufacturability. Private label programs enable businesses to develop branded products without investing in manufacturing infrastructure, with support from initial design through final delivery.

All engineering and production takes place at Go Industries facilities in Texas, allowing for quality control and rapid delivery to North American markets. The company maintains state-of-the-art equipment and machinery to provide cost-effective solutions across different production volumes.

The enhanced capabilities include specialized sheet metal operations such as bending, shearing, notching, and punching. These services complement the company's existing fabrication expertise, which has been developed through four decades of serving diverse industrial markets.

Established in 1978, Go Industries holds Platinum Status with SEMA. As a division of Longhorn Reels, the company originally manufactured truck accessories and law enforcement equipment before expanding into custom OEM manufacturing services. The company's four decades of manufacturing experience support its position as a custom manufacturer in the Southwest region.

The enhanced manufacturing capabilities represent Go Industries' response to evolving market demands, particularly in emerging technology sectors requiring specialized fabrication services. The company's investment in advanced manufacturing technologies and process improvements supports its ability to serve diverse industrial markets with precision manufacturing solutions.
