

# Go Industries Announces Enhanced OEM Manufacturing and Fabrication Services

*March 18, 2026*

Richardson, TX - March 18, 2026 -
Go Industries has announced enhanced custom manufacturing and fabrication services for original equipment manufacturers, introducing new precision manufacturing capabilities for AI data center server racks and expanded tube and sheet metal processing operations at its Texas facilities.

The announcement comes as the company responds to increased demand from OEM partners across automotive, telecommunications, medical equipment, defense, and emerging AI data center infrastructure sectors. The enhanced services include CNC tube bending, rolling, end forming, and sawing, along with robotic welding, laser cutting, plasma cutting, and certified welding to D1.1, B31.1, and B31.3 standards.

"We have enhanced our manufacturing capabilities to address the specific requirements of AI data center infrastructure and other growing industrial sectors," said a Go Industries spokesperson. "These enhancements enable us to provide comprehensive fabrication solutions while maintaining competitive pricing and rapid turnaround times for our OEM partners."

The enhanced service portfolio encompasses precision manufacturing for AI data center server racks, which require exact specifications for housing critical infrastructure components. Tube services now include CNC bending, rolling, end forming, and sawing operations. Sheet metal capabilities feature bending, shearing, notching, punching, robotic welding, laser cutting, and plasma cutting processes.

Additional services include design and engineering consultation, assembly, packaging, chrome plating, powder coating, and pipe profiling. All manufacturing operations take place at the company's Texas facilities, using a high-capacity powder-coating line and a batch oven for product finishing. The company maintains an extensive inventory of tooling and machinery to accommodate varying production volumes.

Industries served through the enhanced capabilities include automotive, cable and wire, commercial equipment, emergency equipment, defense, Department of Transportation, gas, medical, oil, public safety divisions, sport and fitness, transportation safety equipment, and telecommunications sectors. The company offers private label programs that enable businesses to develop branded products through comprehensive support from initial design through final delivery.

The enhancements particularly address requirements in AI data center infrastructure, where server rack manufacturing demands precise specifications and consistent delivery schedules. The company's certified welding capabilities ensure compliance with industry-specific standards across multiple sectors, including defense and medical equipment manufacturing. The expansion of these services reflects broader industry trends toward specialized manufacturing solutions for technology infrastructure and industrial applications.

Go Industries, established in 1978, specializes in truck accessories, law enforcement equipment, and custom manufacturing solutions. The company holds Platinum Status with SEMA and operates as a division of Longhorn Reels. With over 40 years of manufacturing experience, the organization provides engineering and fabrication services from its Texas-based facilities, serving original equipment manufacturers throughout North America. The company's manufacturing capabilities span multiple production technologies, enabling comprehensive solutions for diverse industrial applications.
