

Mindmachines.com Introduces Enhanced RoshiWave Mind Machine with Advanced Brainwave Disentrainment Technology

March 17, 2026

Dallas, Texas - March 17, 2026 -
Mindmachines.com has announced significant enhancements to its RoshiWave meditation technology, introducing advanced brainwave disentrainment protocols and expanded capabilities designed to help users achieve deeper meditative states typically associated with experienced practitioners.

The enhanced RoshiWave platform now features approximately 100 different protocol options, including the newly added pROSHI 3 emulation capabilities. This marks the first public availability of this previously unreleased model, which introduces classic default modes in both positive and negative phases, 3D modes, HD mode, new XD modes, and a sequential mode containing all five ROSHI models.

The technology operates through Dynamic Neuro-Activation, a proprietary process that uses calibrated flickering light delivered through specialized RGB-enabled glasses to influence brainwave frequencies. Unlike conventional entrainment methods that synchronize the brain to specific frequencies, the RoshiWave uses

disentrainment to free the mind from repetitive thought patterns, allowing the brain to normalize its activity naturally.

"The enhanced RoshiWave represents a significant advancement in meditation technology, providing users access to meditative states that might otherwise require years of dedicated practice to achieve," said Fred Williams, Director of Product Development at Mindmachines.com. "The addition of the pROSHI 3 emulation expands our platform's capabilities, offering both personal wellness applications and professional research environments new tools for cognitive optimization."

Clinical adoption of the technology continues to expand, with nearly 100 practitioners worldwide incorporating the RoshiWave as an alternative to classic ROSHI devices that are no longer in production. The USB-rechargeable unit features navigation similar to click-wheel mp3 players, making the technology accessible for both professional and personal use.

The device addresses growing demand for technology-assisted approaches to mental wellness and performance enhancement. Corporate wellness programs and educational institutions have begun integrating such technologies into their offerings, recognizing the potential benefits for stress management and cognitive enhancement. Users report experiencing enhanced mental clarity, stress reduction, and improved meditation practices through regular use of the device.

The enhanced platform supports multiple applications including stress management, sleep improvement, accelerated learning capabilities, and behavioral modification. The technology provides a non-invasive approach to achieving meditative states through photostimulation, sending specially calibrated light through the eyes and into the brain to help normalize brainwave patterns.

Mindmachines.com serves as an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, and meditation machines. Based in Dallas, Texas, and operated by Av3X LLC, the company specializes in technologies designed to enhance mental performance, wellness, and personal achievement through advanced brainwave modulation techniques. The company is the worldwide distributor of the RoshiWave self-meditation device, which is currently available through the mindmachines.com website.
