

Mindmachines.com Advances Digital Meditation Device Technology with Enhanced Brainwave Disentrainment Protocols

March 19, 2026

Dallas, Texas - March 19, 2026 -

Mindmachines.com has announced significant enhancements to its ROSHIwave IN-SIGHT Mind Machine, incorporating advanced brainwave disentrainment protocols that enable users to achieve deeper meditative states typically associated with experienced practitioners. The portable meditation device represents the latest evolution in neurotechnology designed to normalize brainwave patterns through proprietary Dynamic Neuro-Activation processes.

The enhanced ROSHIwave IN-SIGHT utilizes photostimulation technology to deliver calibrated light patterns through specialized RGB-enabled glasses, offering approximately 100 different protocol options to address various meditation and wellness objectives. Unlike traditional entrainment methods that synchronize the brain to specific frequencies, this gadget employs disentrainment techniques to free the mind from repetitive patterns, allowing natural brainwave normalization to occur.

The device has gained significant traction among clinical practitioners, with nearly 100 clinicians worldwide adopting the ROSHIwave IN-SIGHT as an alternative to classic ROSHI devices that are no longer in production. The USB-rechargeable unit features navigation similar to click-wheel mp3 players, making the technology accessible for both professional clinical settings and personal home use.

"The intersection of neuroscience and meditation technology has reached a pivotal point where individuals can access mental states that traditionally required decades of dedicated practice," said Fred Williams, Director of Product Development at Mindmachines.com. "The ROSHIwave IN-SIGHT serves as a practical tool for achieving mental clarity and peace, functioning essentially as a digital compass for the brain that guides users to optimal mental states without conscious effort."

The fourth iteration of the technology, known as the pROSHI 2++, was developed by Chuck Davis and represents substantial improvements in both functionality and user experience. The enhanced device features improved navigation systems and expanded protocol options supporting applications including stress management, accelerated learning capabilities, and behavioral modification. Users can modify the color output of the glasses through simple button controls, enabling one pair of glasses to emulate the entire range of original pROSHI neurodynamic activator glasses configurations.

The ROSHIwave IN-SIGHT package includes the console unit, color-changing RGB RoshiGlasses, a color-changing RGB Ganzfeld RoshiVisor, USB charging equipment, and a carrying case. The device addresses various applications including stress management, sleep improvement, accelerated learning, and behavior modification. Users report achieving states similar to those experienced by advanced meditation practitioners within 15-minute sessions, though individual results vary based on personal factors and consistency of use.

The mind machine market has experienced increased interest as more individuals seek technology-assisted approaches to mental wellness and performance enhancement. The ROSHIwave addresses this demand by providing a non-invasive method for achieving altered states of consciousness and ganzfeld effects that support inner peace, personal wellness, and improved sleep quality.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIwave self-meditation device. Based in Dallas, Texas, and operated by Av3X LLC, the company specializes in technologies designed to enhance mental performance, wellness, and personal achievement through advanced brainwave modulation techniques.
