

Mindmachines.com Highlights RoshiWave Mindmachine Adoption Among Clinical Practitioners Worldwide

March 20, 2026

Dallas, Texas - March 20, 2026 - PRESSADVANTAGE -

Mindmachines.com reports that nearly 100 clinical practitioners worldwide have integrated the ROSHIwave IN-SIGHT Mind Machine into their practices, marking significant adoption of the brainwave disentrainment technology as an alternative to classic ROSHI devices no longer in production.

The fourth-generation device, known as the pROSHI 2++, incorporates advanced brainwave disentrainment protocols that enable users to achieve deeper meditative states typically associated with experienced practitioners. The technology uses photostimulation to deliver calibrated light patterns through specialized RGB-enabled glasses, offering approximately 100 different protocol options to address various meditation and wellness objectives.

"The ROSHIwave IN-SIGHT represents a significant advancement in making deep meditation accessible to both clinical practitioners and individual users," said Fred Williams, spokesperson for Mindmachines.com.

"Clinical practitioners have embraced this technology because it provides measurable results in stress management, sleep improvement, and behavioral modification applications."

The device employs a process called Dynamic Neuro-Activation, which dis-entrains abnormal brainwave frequencies and guides the mind to a meditative state beyond the perception of time. Through photostimulation technology, specially calibrated flickering light travels through the eyes and into the brain, helping to free the mind from unhealthy cyclical patterns. Users report achieving states similar to those experienced by advanced meditation practitioners within 15-minute sessions, though individual results vary based on personal factors and consistency of use. Users can [click here](#) to explore the various applications.

The USB-rechargeable unit features navigation similar to click-wheel MP3 players, making the technology accessible for both professional clinical settings and personal home use. The complete ROSHIwave IN-SIGHT package includes the console unit, color-changing RGB RoshiGlasses, a color-changing RGB Ganzfeld RoshiVisor, USB charging equipment, and a carrying case.

Developed by Chuck Davis, the pROSHI 2++ iteration features improved navigation systems and expanded protocol options supporting applications including stress management, accelerated learning capabilities, and behavioral modification. The device contains all well-researched classic ROSHI-style protocols plus new multiplexed versions designed to address various wellness objectives.

Clinical adoption has been driven by the device's versatility in addressing multiple applications. Practitioners utilize the technology for stress management, sleep improvement, accelerated learning, and behavior modification. The device serves as what practitioners describe as a digital compass for the brain, gently normalizing brainwaves and guiding the mind to a sublime meditative state.

For those interested in the technology, practitioners recommend reviewing the comprehensive protocol options available. Learn more about how the device addresses specific wellness objectives on the company's [website](#).

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIwave self-meditation device. Based in Dallas, Texas, and operated by Av3X LLC, the company specializes in technologies designed to enhance mental performance, wellness, and personal achievement through advanced brainwave modulation techniques.
