

Mindmachines.com Announces Growing Clinical Adoption of ROSHIwave Mental Focus and Meditation Gadget

March 26, 2026

Dallas, Texas - March 26, 2026 -
Mindmachines.com today announced that nearly 100 clinical practitioners worldwide have integrated the ROSHIwave IN-SIGHT Mind Machine into their practices, marking a significant milestone in the clinical adoption of brainwave disentrainment technology for meditation and mental wellness applications.

The fourth-generation device, known as the pROSHI 2++, employs advanced brainwave disentrainment protocols that enable users to achieve deeper meditative states typically associated with experienced practitioners. The technology delivers calibrated light patterns through specialized RGB-enabled glasses, offering approximately 100 different protocol options to address various meditation and wellness objectives.

"The ROSHIwave IN-SIGHT represents a significant advancement in making deep meditation accessible to both clinical practitioners and individual users," said Fred Williams, Director of Clinical Integration at Mindmachines.com. "We're seeing practitioners adopt this technology as an effective tool for helping their

clients achieve states of mental clarity and relaxation that would traditionally require years of meditation practice."

The device utilizes a process called Dynamic Neuro-Activation, which dis-entrains abnormal brainwave frequencies and guides the mind to a meditative state beyond the perception of time. Through photostimulation technology, the system sends specially calibrated flickering light through the eyes and into the brain, helping to free the mind from unhealthy cyclical patterns.

Clinical practitioners have particularly embraced the ROSHIwave IN-SIGHT as an alternative to classic ROSHI devices that are no longer in production. The USB-rechargeable unit features navigation similar to click-wheel mp3 players, making the technology accessible for both professional clinical settings and personal home use.

The complete ROSHIwave IN-SIGHT package includes the console unit, color-changing RGB RoshiGlasses, a color-changing RGB Ganzfeld RoshiVisor, USB charging equipment, and a carrying case. The device addresses various applications including stress management, sleep improvement, accelerated learning, and behavior modification.

Developed by Chuck Davis, the pROSHI 2++ represents substantial improvements in both functionality and user experience compared to previous generations. The enhanced device features improved navigation systems and expanded protocol options supporting a wide range of wellness applications.

Users report achieving states similar to those experienced by advanced meditation practitioners within 15-minute sessions, though individual results vary based on personal factors and consistency of use. The device serves as what the company describes as a digital compass for the brain, gently normalizing brainwaves and guiding the mind to a sublime meditative state without conscious effort.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIwave self-meditation device. Based in Dallas, Texas, and operated by Av3X LLC, the company specializes in technologies designed to enhance mental performance, wellness, and personal achievement through advanced brainwave modulation techniques.
