Wilmslow All-On-4 Dental Implants Private Dentist Dr Natasja Kashyap Recommends Consultations at The Croft Dental & Implant Practice

March 12, 2026

March 12, 2026 -
People in Wilmslow who are experiencing significant tooth loss may now explore long-term teeth replacement options following confirmation that consultations for All-On-4 dental implants are available at The Croft Dental & Implant Practice. The practice has announced that appointments are open for individuals who wish to discuss whether implant-supported teeth may be suitable for restoring a full arch of missing or failing teeth.

Loss of multiple teeth can affect daily routines in ways that extend beyond appearance. Chewing certain foods may become difficult, speech can change, and many people report a gradual decline in confidence when smiling or speaking in social situations. While removable dentures have traditionally been used to replace missing teeth, developments in implant dentistry have introduced additional approaches designed to offer greater stability.

Readers curious to learn how All-On-4 dental implants replace a full arch of missing teeth can visit: https://www.croftdental.co.uk/dental-implants/all-on-4-dental-implants/.

All-On-4 dental implants are designed to replace a full arch of teeth using four carefully positioned implants within the jaw. These implants act as artificial roots that support a fixed bridge of replacement teeth. By anchoring the bridge to the implants, the restoration remains securely supported and does not rely on adhesives or daily removal in the way that conventional dentures do.

This method is often considered for patients who have lost most or all of their teeth in either the upper or lower arch, or where the remaining teeth may not be suitable for long-term restoration. The implants are placed in specific positions so that they can provide support for the replacement teeth while making efficient use of the available bone structure.

Dr Natasja Kashyap, private dentist at The Croft Dental & Implant Practice, said that All-On-4 dental implants can provide a practical solution for certain patients facing extensive tooth loss. ?When someone has lost most of their teeth, restoring comfort and function becomes a priority,? she explained. ?All-On-4 implants allow a full arch of teeth to be supported on a small number of implants, which can provide a stable alternative to removable dentures for many suitable cases.?

The initial consultation stage is intended to determine whether this form of treatment is appropriate for the patient?s oral health. Dentists typically examine the teeth and gums, discuss the patient?s dental history and consider factors such as bone health before outlining possible treatment options.

In addition to full-arch restoration using All-On-4 dental implants, The Croft Dental & Implant Practice also offers other implant treatments for patients who may be missing one or several teeth. Details about the dental implant patient journey and what to expect during the treatment can be found at: https://www.croftdental.co.uk/dental-implants/dental-implant-patient-journey/.

Dental implants can be used in different ways depending on the number of teeth requiring replacement. A single dental implant may be placed to support one missing tooth, while two or more implants can anchor a bridge when several neighbouring teeth are absent. In each situation, the implant functions as a stable base within the jaw, supporting a carefully designed replacement tooth.

Patients considering implant treatment often begin with questions about how the process works. Consultations usually involve explaining the stages involved in placing implants, the time required for healing and the steps taken before the final restoration is fitted. Dentists also discuss how patients can maintain good oral hygiene around implants to support long-term results.

The consultation stage allows individuals to review these options and ask questions about the procedures involved. Not every patient will require full-arch replacement, and in some situations, simpler implant treatments may provide the most appropriate solution.

The Croft Dental & Implant Practice?s approach to dentistry and the range of dental treatments offered are available at: https://www.croftdental.co.uk/.

The practice provides dental care for private patients in Wilmslow and surrounding areas, offering treatments that range from routine examinations to advanced restorative procedures. The dental team places emphasis on careful assessment and open discussion so that patients understand the treatments available to them before any procedure begins.

Dr Kashyap noted that many people seeking advice about missing teeth are often unaware of the different options that modern implant dentistry provides. By offering consultations for All-On-4 dental implants alongside other implant treatments, the practice aims to give patients the opportunity to explore solutions that may help restore everyday comfort and confidence.
