

Mindmachines.com Advances Mental Fitness Device Technology with Enhanced Brainwave Protocols

April 01, 2026

Dallas, Texas - April 01, 2026 -
Mindmachines.com has announced significant enhancements to its ROSHIwave IN-SIGHT Mind Machine, incorporating advanced brainwave disentrainment protocols that enable users to achieve deeper meditative states typically associated with experienced practitioners. The fourth-generation device, known as the pROSHI 2++, represents substantial improvements in both functionality and user experience.

The enhanced self meditation machine utilizes photostimulation technology to deliver calibrated light patterns through specialized RGB-enabled glasses, offering approximately 100 different protocol options to address various meditation and wellness objectives. The technology employs a process called Dynamic Neuro-Activation, which dis-entrains abnormal brainwave frequencies and guides the mind to a meditative state beyond the perception of time.

Nearly 100 clinical practitioners worldwide have adopted the ROSHIwave IN-SIGHT as an alternative to classic ROSHI devices that are no longer in production. The USB-rechargeable unit features navigation

similar to click-wheel mp3 players, making the technology accessible for both professional clinical settings and personal home use.

"The integration of disentrainment protocols represents a significant advancement in how we approach mental wellness and cognitive optimization," said Fred Williams, Director of Clinical Integration at Mindmachines.com. "Clinical practitioners are reporting that their clients achieve states of mental clarity and relaxation that would traditionally require years of meditation practice, often within just 15-minute sessions."

The mental fitness device addresses various applications including stress management, sleep improvement, accelerated learning, and behavior modification. Users report achieving states similar to those experienced by advanced meditation practitioners, though individual results vary based on personal factors and consistency of use.

The complete ROSHIwave IN-SIGHT package includes the console unit, color-changing RGB RoshiGlasses, a color-changing RGB Ganzfeld RoshiVisor, USB charging equipment, and a carrying case. The device sends specially calibrated flickering light through the eyes and into the brain, helping to free the mind from unhealthy cyclical patterns.

Developed by Chuck Davis, the pROSHI 2++ features improved navigation systems and expanded protocol options supporting applications across multiple wellness domains. The device contains all well-researched classic ROSHI-style protocols plus new multiplexed versions, providing practitioners and individual users with comprehensive options for mental optimization.

The growing adoption among healthcare professionals reflects increasing recognition of technology-assisted meditation and mental wellness approaches. The device serves as what practitioners describe as a digital compass for the brain, normalizing brainwave patterns without requiring conscious effort from users.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIwave self-meditation device. Based in Dallas, Texas, and operated by Av3X LLC, the company specializes in technologies designed to enhance mental performance, wellness, and personal achievement through advanced brainwave modulation techniques.
