

Bay Clinic of Chiropractic Advances Functional Neurology Treatment for Drug-Free Neurological Recovery

March 16, 2026

Panama City, FL - March 16, 2026 -
Bay Clinic of Chiropractic in Panama City, Florida, is expanding its advanced treatment protocols to address the growing demand for non-pharmaceutical solutions to neurological conditions. The clinic's comprehensive approach combines advanced brain-based therapies with traditional chiropractic care to help patients recover from conditions ranging from post-concussion symptoms to chronic migraines and neurodegenerative disorders.

The clinic's treatment methodology centers on Chiropractic Functional Neurology, which utilizes the brain's natural neuroplasticity to retrain neural pathways and restore proper brain-body communication. This drug-free approach has become increasingly relevant as more patients seek alternatives to long-term medication use for neurological conditions.

Dr. Tony Salamay Antoine Salameh DC, who leads the clinic with over two decades of experience and a

master's degree in Human Nutrition, emphasizes the importance of addressing root causes rather than managing symptoms. "Our brain-based approach allows us to target the underlying neurological dysfunction that often manifests as chronic pain, vertigo, or cognitive challenges," said Dr. Tony Salamay. "By combining targeted brain stimulation exercises with spinal adjustments and vestibular rehabilitation, we're seeing remarkable improvements in patients who had previously exhausted conventional treatment options."

The clinic's integrated treatment protocols incorporate multiple therapeutic modalities, including applied kinesiology, sacro occipital technique, craniosacral therapy, and PEMF therapy. Each treatment plan is customized based on comprehensive neurological assessment and the patient's specific condition. This personalized approach has proven particularly effective for patients with autism spectrum disorders, learning disabilities, post-traumatic brain injuries, and attention deficit disorders.

Functional Medicine plays a crucial role in the clinic's treatment philosophy, with nutritional interventions supporting neurological recovery. The clinic offers clinical nutrition services, nutrition response testing, and autonomic response testing to identify and address metabolic factors that may contribute to neurological symptoms. This comprehensive approach ensures that patients receive treatment that addresses both structural and biochemical aspects of their conditions.

The rising incidence of neurological conditions has created unprecedented demand for specialized care. Recent studies indicate that traumatic brain injuries, chronic migraines, and neurodegenerative conditions are affecting millions of Americans, with many seeking alternatives to pharmaceutical interventions. Bay Clinic of Chiropractic's non-invasive treatment protocols offer these patients a path to recovery without the side effects often associated with long-term medication use.

"Patients are increasingly aware that their bodies have remarkable healing capabilities when given the right support," noted Dr. Tony Salamay. "Our goal is to facilitate that natural healing process through precise neurological rehabilitation and nutritional support, helping patients return to active, fulfilling lives."

Bay Clinic of Chiropractic serves patients throughout the Florida Panhandle, including Panama City, Panama City Beach, Destin, and surrounding communities. The clinic focuses on treating chronic pain, migraines, vertigo, dystonia, dyslexia, and various neurodegenerative disorders through its comprehensive functional neurology programs. The clinic maintains an active presence in the community through educational initiatives and continues to incorporate the latest advances in neurological rehabilitation into its treatment protocols.
