

Mindmachines.com Advances Brainwave Technology with Enhanced Disentrainment Protocols for Mental Wellness

April 08, 2026

Dallas, Texas - April 08, 2026 -

Mindmachines.com has announced significant enhancements to its ROSHIwave IN-SIGHT Mind Machine, incorporating advanced disentrainment protocols that represent a notable evolution in photostimulation technology for mental wellness applications. The fourth-generation device, designated as the pROSHI 2++, features expanded protocol options and refined capabilities designed to support deeper meditative states and improved cognitive performance.

The enhanced ROSHIwave utilizes Dynamic Neuro-Activation technology to deliver precisely calibrated light patterns through specialized RGB LED glasses, influencing brainwave frequencies through a process fundamentally different from traditional entrainment methods. Rather than forcing synchronization to specific frequencies, the disentrainment approach allows the brain to normalize its activity patterns through natural error-correction processes.

"The advancement in our protocols represents years of research into how photostimulation can support mental wellness without forcing artificial brainwave patterns," said Fred Williams, Director of Technology Development at Mindmachines.com. "By focusing on disentrainment rather than entrainment, we're allowing the brain's natural regulatory systems to guide users toward optimal mental states."

The updated device now offers approximately 100 different protocol options, substantially expanding from previous generations. Users can modify color output through intuitive button controls, enabling a single pair of glasses to replicate the full range of original pROSHI neurodynamic activator configurations. The USB-rechargeable unit features navigation similar to classic mp3 players, making the technology accessible for both professional clinical settings and personal home use.

Clinical practitioners worldwide have adopted the technology as an alternative to classic ROSHI devices that are no longer in production. Nearly 100 healthcare professionals currently integrate the ROSHIwave into their practice for applications including stress management, sleep improvement, accelerated learning capabilities, and behavioral modification support.

The device operates through what the company describes as an Error-Correction System for the Brain, helping to normalize brainwave patterns that may have become stuck in repetitive cycles. This approach differs from conventional meditation aids by dis-entraining abnormal frequencies rather than imposing external rhythms, allowing users to achieve meditative states similar to those reported by advanced practitioners.

The complete ROSHIwave IN-SIGHT package includes the console unit, color-changing RGB RoshiGlasses, a color-changing RGB Ganzfeld RoshiVisor, USB charging equipment, and a carrying case. The system sends specially calibrated flickering light through the eyes, designed to help free the mind from cyclical patterns that may contribute to stress or reduced cognitive performance.

Mindmachines.com serves as an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, and meditation machines. The company operates as the worldwide distributor of the ROSHIwave self-meditation device. Based in Dallas, Texas, and operated by Av3X LLC, the company specializes in technologies designed to enhance mental performance, wellness, and personal achievement through advanced brainwave modulation techniques. The ROSHIwave self-meditation machine is currently available at mindmachines.com.
