Baldino Dumpsters Expands Service Capabilities for Concrete Disposal in Central Florida

March 24, 2026

DELAND, FL - March 24, 2026 -
Baldino Dumpsters, a DeLand-based waste management company, has expanded its service capabilities to include specialized handling of concrete disposal for both residential and construction projects throughout Central Florida. The expansion addresses the growing demand for heavy debris removal services in the region's active construction and renovation market.

The company's enhanced concrete disposal service provides contractors and homeowners with dedicated solutions for managing one of the most challenging types of construction waste. Concrete debris, which can quickly accumulate during demolition and renovation projects, requires specialized equipment and handling procedures due to its weight and bulk.

"Concrete removal presents unique challenges that standard waste disposal methods cannot adequately address," said Darren Peters, Operations Manager at Baldino Dumpsters. "By expanding our capabilities to specifically handle concrete projects, we're filling a critical service gap for contractors and property owners who need reliable solutions for heavy debris removal. Our team understands that concrete projects generate substantial weight, and we've structured our service to handle these demands efficiently."

The expansion comes as Central Florida experiences continued growth in both residential renovations and commercial construction projects. Concrete removal needs typically arise from driveway replacements, sidewalk renovations, foundation work, and pool demolitions, all common projects in the region.

Baldino's Dumpsters offers multiple container sizes suitable for concrete disposal, including 10, 15, 20, 30, and 40-yard options. The company's fleet serves an extensive area throughout Central Florida, including DeLand, Daytona Beach, Sanford, Ormond Beach, Port Orange, Deltona, and surrounding communities. Each container is rated for specific weight capacities, ensuring safe transport and disposal of heavy concrete materials.

The concrete disposal service integrates with the company's existing waste management offerings, which include construction debris removal, yard waste disposal, and general residential cleanouts. This comprehensive approach allows customers to coordinate multiple waste streams through a single provider, simplifying project logistics.

Concrete waste requires proper disposal methods to comply with environmental regulations. The material cannot be disposed of in standard landfills and must be processed at specialized facilities where it can be crushed and recycled for use in new construction projects. Baldino Dumpsters manages the entire disposal chain, ensuring compliance with local and state regulations.

"The weight and density of concrete means that even small renovation projects can generate tons of material," added Peters. "Our expanded service takes the complexity out of concrete disposal by providing appropriately sized containers and managing the entire removal process from delivery through final disposal."

The company maintains flexible scheduling to accommodate the varying timelines of construction and renovation projects. Rental periods range from 14 to 30 days depending on container size, with options for extended rentals when projects require additional time.

Baldino Dumpsters has served the Central Florida region since its founding, establishing a reputation for reliable waste management services. The company operates a modern fleet of roll-off containers and trucks, supported by an online booking system that provides transparent pricing and scheduling options. The business serves both residential customers undertaking home improvement projects and commercial contractors managing large-scale construction sites throughout the greater DeLand area and beyond.
