

Sarkinen Industrial Pipelining Highlights Advanced No-Dig Solutions for Pacific Northwest Infrastructure

March 16, 2026

VANCOUVER, WA - March 16, 2026 -
Sarkinen Industrial Pipelining continues to demonstrate excellence in trenchless pipeline rehabilitation services across Washington and Oregon, maintaining consistent five-star ratings from municipal and commercial clients for their specialized no-dig repair solutions.

The company specializes in advanced pipeline rehabilitation techniques that minimize disruption to communities and businesses while addressing critical infrastructure needs. Their comprehensive service portfolio includes Cured In Place Pipelining (CIPP), closed-circuit television inspections, vacuum truck services, and specialized robotic pipeline cutting technology that eliminates the need for traditional excavation methods.

"Infrastructure maintenance remains a critical challenge for municipalities and commercial properties throughout the Pacific Northwest," said a Sarkinen Industrial Pipelining spokesperson. "Our trenchless technologies allow us to address pipeline failures, blockages, and deterioration without the extensive

disruption and cost associated with traditional dig-and-replace methods. This approach has proven particularly valuable for urban areas where excavation would impact traffic, businesses, and residents."

The company's CIPP technology enables rehabilitation of pipes ranging from 4 to 24 inches in diameter using UV or steam curing techniques. This method creates a new pipe within the existing structure, extending infrastructure lifespan by decades without excavation. Their certified technicians utilize Schwalm robotic systems for precision cutting operations, removing concrete, steel, and other obstructions from pipelines while preserving the surrounding infrastructure.

Sarkinen Industrial Pipelining serves a diverse client base, including municipalities, government agencies, ports, industrial facilities, commercial properties, and homeowners' associations. Their 24/7 availability ensures rapid response to emergency situations, while scheduled maintenance programs help clients prevent costly failures. The company's vacuum truck services provide essential cleaning and maintenance for storm, sewer, and wastewater systems using high-powered hydro jetting, descaling, and root removal techniques.

For trenches mainline repairs, the company employs steam-cured pipe lining, UV spot repairs, and T-Liners to address lateral connections without excavation. These methods significantly reduce project timelines and costs while minimizing environmental impact and community disruption.

The company maintains comprehensive safety certifications, including OSHA, confined space safety, and OSHA 10 and 30 training. Their technicians are certified in LightRay technologies for pipe inversion and short-term repairs, ensuring compliance with industry standards for pipeline assessment and rehabilitation.

High-definition CCTV inspection services provide detailed pipeline assessments from manhole to manhole, identifying issues such as blockages, cracks, root intrusion, and structural deterioration before they become critical failures. This proactive approach helps clients prioritize maintenance budgets and prevent emergency situations.

Sarkinen Industrial Pipelining operates throughout Washington and Oregon, providing free on-site estimates for all projects. The company works with pipes ranging from 3 to 36 inches in diameter, addressing the full spectrum of municipal and commercial pipeline infrastructure needs. Their commitment to using the most advanced technology in the industry ensures efficient, cost-effective solutions that extend infrastructure lifespan while minimizing disruption to communities and businesses.
