

Filterbuy Inc. Expands Two-Inch Air Filter Line to Meet Rising Demand for Enhanced Indoor Air Quality

March 24, 2026

Talladega, AL - March 24, 2026 - PRESSADVANTAGE -

Filterbuy, Inc., a leading American manufacturer of residential and commercial air filters, today announced the expansion of its two-inch air filter product line in response to growing consumer demand for improved indoor air quality and HVAC system efficiency. The expanded line addresses the increasing awareness among homeowners and facility managers about the critical role proper air filtration plays in maintaining healthy indoor environments.

The expansion comes as recent industry data shows that Americans spend approximately 90 percent of their time indoors, where pollutant concentrations can be two to five times higher than outdoor levels. The company's enhanced two-inch filter offerings provide superior filtration capabilities compared to standard one-inch filters, capturing a broader range of airborne particles, including pollen, dust, pet dander, smoke particles, and other common indoor pollutants.

"The demand for Filterbuy, Inc. two inch air filters has grown substantially as more consumers recognize that

thicker filters provide better filtration and longer service life," said David Heacock, spokesperson for Filterbuy. "Our expanded line ensures that customers can find the right MERV rating and size combination to meet their specific air quality needs while maintaining optimal HVAC system performance."

The two-inch filter format offers several advantages over traditional one-inch filters. The increased surface area allows for better particle capture without restricting airflow, which helps HVAC systems operate more efficiently. This improved efficiency can lead to reduced energy consumption and extended equipment life. Additionally, the thicker filters typically last up to 90 days between replacements, compared to the 30-day replacement cycle often required for thinner alternatives.

Filtration efficiency remains a key consideration in the expanded product line. The filters are available in various MERV ratings, with most residential applications best served by ratings between 6 and 13. Higher MERV ratings provide enhanced filtration for households with allergy sufferers, pets, or those located in areas with elevated outdoor pollution levels. Each filter in the expanded line is manufactured in the United States and designed to withstand high humidity and temperature variations common in HVAC systems.

The timing of the expansion aligns with seasonal preparation for winter months when homes are sealed tighter against cold weather, potentially concentrating indoor pollutants. Proper air filtration becomes especially important during these periods to maintain healthy indoor air quality and prevent the buildup of contaminants that can affect respiratory health and overall comfort.

Based in Talladega, Alabama, Filterbuy has established itself as a trusted provider of air filtration solutions for both residential and commercial applications. The family-owned company manufactures a comprehensive range of standard and custom-sized filters, including rigid cell filters for high-volume commercial applications and whole house filtration systems. The company has earned over 65,000 five-star reviews from customers nationwide and maintains a commitment to fast shipping, with most orders processed within one business day. Beyond individual filter sales, the company offers subscription services that help customers maintain regular replacement schedules, ensuring consistent air quality and system performance throughout the year.
