

## **DataMasters Announces New Flower Mound, Texas Location and Expands Access to Automotive Mailing Lists for Industry Businesses**

*March 23, 2026*

FLOWER MOUND, TX - March 23, 2026 - PRESSADVANTAGE -

DataMasters has announced the opening of a new operational location at 5810 Long Prairie Rd, # 700-178, Flower Mound, TX 76028, marking an organizational development milestone for the data services company, which is known for providing specialized marketing data solutions to businesses across the United States. The new address represents a continuation of the company's work in supplying verified mailing lists and targeted data sets designed to help organizations identify and communicate with relevant consumer and business audiences.

DataMasters supplies businesses with curated mailing lists that support direct marketing efforts, customer prospecting, and targeted outreach campaigns. The company develops and organizes marketing data used by businesses to identify and communicate with potential customers across a variety of industries. Its services focus on compiling structured data sets that help organizations conduct more focused marketing initiatives. The Flower Mound location functions as an administrative and operational hub as the company continues expanding its role as a provider of specialized mailing list data for multiple business sectors.

The organization works with businesses that rely on structured data to support targeted marketing strategies, including companies involved in automotive sales, automotive services, insurance, home services, and other industries that utilize consumer data to identify potential customers. Among these sectors, automotive-related businesses remain one of the primary users of specialized mailing lists due to the need for precise audience targeting when promoting vehicle sales, repair services, aftermarket products, or related financial services.

Automotive mailing lists provided by DataMasters are structured to support businesses that require demographic and ownership-based data related to vehicle owners and households. These datasets are often used by dealerships, service providers, warranty companies, and automotive marketing agencies seeking to connect with consumers who may be interested in purchasing vehicles, scheduling maintenance services, or responding to vehicle-related promotional offers.

According to a company spokesperson, the decision to formalize operations at the new Flower Mound location reflects the continued demand for targeted marketing data within automotive and related industries. "The new location provides an operational base as the organization continues managing and distributing specialized mailing lists used by businesses across multiple sectors," said David Rickenbacher, owner of DataMasters. "Automotive mailing lists remain a significant portion of the data services requested by companies that rely on direct outreach and structured consumer data to support marketing campaigns."

Direct marketing remains a long-standing method used by businesses to communicate with potential customers through physical mail campaigns, catalog distribution, promotional offers, and informational outreach. Mailing lists that contain verified consumer data allow companies to focus marketing efforts on households or individuals who meet specific criteria, including geographic location, vehicle ownership details, purchasing indicators, or household demographics.

Within the automotive sector, such data may include information related to vehicle make and model, model year, ownership duration, and geographic concentration of vehicle owners. Businesses often rely on this type of data when promoting vehicle trade-in opportunities, maintenance reminders, aftermarket accessories, or extended warranty programs. Mailing lists designed around automotive ownership patterns allow organizations to narrow outreach efforts to audiences who are statistically more likely to respond to automotive-related marketing materials.

Rickenbacher stated that maintaining accurate and structured data is an ongoing process that requires verification methods and database management procedures. "The company's work involves compiling and organizing data so businesses can implement targeted campaigns with greater efficiency," Rickenbacher said.

?Organizations across the automotive sector often require highly specific information, and the goal is to provide data sets that align with those operational needs.?

Although automotive data represents a central category of the company?s offerings, DataMasters also maintains mailing lists designed for a variety of industries. Businesses involved in insurance, home services, financial services, and retail marketing frequently utilize targeted consumer lists to identify potential clients within particular geographic areas or demographic groups. These lists may be used for direct mail campaigns, customer outreach initiatives, or broader marketing strategies that require a defined target audience.

The expansion of data-driven marketing methods has led many organizations to combine traditional direct mail campaigns with digital outreach strategies. However, mailing lists remain a relevant component of many marketing programs, particularly for businesses that depend on location-specific or ownership-based targeting. Physical mail campaigns, when supported by structured mailing lists, continue to be used by organizations seeking to deliver printed marketing materials to selected households.

The Flower Mound location allows DataMasters to coordinate internal processes related to the maintenance, organization, and distribution of its data services. Administrative functions, customer coordination, and operational support for marketing list requests are expected to be handled through the Flower Mound office as the company continues serving clients nationwide.

Rickenbacher noted that demand for automotive mailing lists has remained consistent due to the wide range of businesses involved in vehicle sales, maintenance, and aftermarket services. ?Companies throughout the automotive industry frequently rely on targeted data to identify vehicle owners who may be interested in specific services or products,? Rickenbacher said. ?Mailing lists built around automotive ownership patterns allow businesses to structure outreach campaigns in a more deliberate and organized way.?

The use of targeted mailing lists has long been associated with direct marketing campaigns aimed at reaching potential customers through personalized communication. Businesses often use data filters to narrow mailing lists according to geographic boundaries, income brackets, vehicle types, or consumer behavior indicators. These filters allow organizations to create more focused outreach campaigns rather than distributing promotional materials to broad, undefined audiences.

DataMasters organizes mailing lists based on multiple layers of criteria that may include demographic indicators, geographic segmentation, and consumer ownership characteristics. By organizing datasets around these variables, businesses can tailor marketing messages to audiences that align with specific products or services. In the case of automotive-related campaigns, this might involve targeting households that own vehicles within a particular age range or identifying individuals likely to consider vehicle upgrades or

service appointments.

The company's operational framework involves the continual updating and verification of marketing data to ensure that mailing lists remain relevant for businesses conducting outreach campaigns. Data verification processes may involve routine database maintenance, standardization procedures, and structural organization of data records to maintain usability for marketing applications.

Rickenbacher emphasized that the new Flower Mound location reflects the company's focus on maintaining organized data systems that support marketing operations for businesses across multiple industries. "Establishing a formal operational address in Flower Mound provides a central point for administrative coordination as the company continues providing mailing list data to organizations nationwide," Rickenbacher said.

The Flower Mound office is expected to support DataMasters' continued work in compiling and distributing data used by businesses for customer outreach and market identification. Companies seeking to identify potential customers in the automotive sector and other industries frequently rely on specialized mailing lists to support both short-term promotional campaigns and long-term marketing strategies.
