Summit Scapes Construction Emphasizes Hardscaping Expertise as Established Landscaping Company

March 30, 2026

MANLIUS, NY - March 30, 2026 -
Summit Scapes Construction, a landscaping company serving Central New York, completed a series of hardscape installations for residential and commercial properties in Onondaga County and surrounding areas during the past construction season. These projects included stone patios, walkways, retaining walls, and drainage systems designed to address local terrain and climate conditions.

The landscaping company installed multiple patios using paver systems that integrate with existing site grading. One such patio measured within typical project ranges of 5,000 to 20,000 dollars in scope. Walkways completed in prior years, including one installed five years ago, continue to show no signs of shifting or surface degradation according to property records and owner reports.

Retaining walls formed part of several installations, with construction timelines averaging three to five days per standard wall. These structures manage sloped areas and support soil stability on properties in Manlius and nearby communities. Boulder installations accompanied some walls to create natural transitions with surrounding landscape features.

Drainage systems installed alongside hardscape elements handle water flow from more than 100 inches of annual snowfall and seasonal rainfall in Onondaga County. Project timelines for combined drainage and hardscape work ranged from one to two days for basic systems to up to two weeks for larger patio and wall combinations. Permeable paver sections in select designs allow water infiltration to reduce surface runoff.

Client reports from completed installations provide specific observations. Vicki F. reported that the patio installation proceeded in a professional manner with satisfactory results. Andy S. confirmed that a walkway installed five years earlier maintains its original condition without visible wear. Codi G. noted that the patio surfaces remain level with tight joints after completion.

The landscaping company maintains full insurance coverage and provides a one-year warranty on installed pavers and plant material, with upgrade options available for certain projects. With 13 years of operation in the Manlius area, the firm has accumulated experience across residential patios, commercial walkways, and site preparation tasks that include excavation and soil management.

Outdoor living features such as custom fire pits and lighting installations extended the functionality of several hardscape projects. These elements allow property use beyond daylight hours while coordinating with paver layouts and plantings. Tree and shrub placements around new structures create defined borders and visual layering in the completed spaces.

Commercial snow removal services operate in conjunction with the hardscape work, maintaining access to patios and walkways during the winter months. This sequence of services supports continuous property functionality from installation through seasonal changes.

Hardscape and landscaping elements combine to produce measurable site improvements. Retaining walls reduce erosion on sloped lots, while integrated drainage minimizes water accumulation near foundations. Project scopes vary from smaller walkway installations completed in one to two days to more extensive patio and wall systems requiring up to two weeks.

The series of completed projects reflects ongoing demand for integrated outdoor construction in Central New York. Properties in Madison County and Oswego County also received similar hardscape applications tailored to their specific grading and soil profiles.

Summit Scapes Construction continues operations based on accumulated project data from the region. The landscaping company applies techniques refined through repeated installations of stonework, pavers, and drainage features across varying property sizes and uses.

Additional installations addressed pool hardscape and stone veneer applications on select structures. These

components coordinate with primary patios and walkways to extend design consistency. Site preparation steps, including grading and excavation, precede all hardscape placements to establish stable bases.

The completed work contributes to property configurations that accommodate both daily use and seasonal demands. Outdoor kitchens in certain projects provide dedicated entertainment areas within the hardscape framework, with custom layouts matching client requirements and site dimensions.

Summit Scapes Construction is a hardscape and landscape company in Manlius, New York, specializing in the creation of outdoor spaces. The firm offers services ranging from landscape installation to snow removal, serving both residential and commercial clients in Central New York.
