

Sprayman Introduces Compliance Initiative for 2026 Energy Code Requirements with DIY Spray Foam Solutions

April 07, 2026

April 07, 2026 -

Sprayman, a leading provider of spray foam insulation and sealant solutions, has introduced a comprehensive Compliance Initiative designed to help homeowners and small contractors meet the stringent air-sealing and R-value requirements mandated by the 2026 International Energy Conservation Code (IECC). The initiative addresses growing concerns about residential properties failing to meet new legal building standards that significantly raise the bar for energy efficiency.

The 2026 IECC updates have created what industry experts call a "Compliance Gap," where traditional insulation methods often fail to meet the new air-leakage testing requirements known as ACH50 standards. These regulations require homes to achieve specific air infiltration rates that many conventional insulation approaches cannot reliably deliver. The new standards affect not only new construction but also major renovations, making compliance a critical concern for property owners seeking to maintain home values and avoid potential legal complications.

Sprayman's closed-cell foam technology provides the necessary continuous air barrier in a single application, addressing both thermal insulation and air-sealing requirements simultaneously. The company's Spraycoat product line, which carries a Class A fire rating, enables property owners to achieve the demanding performance metrics required by the 2026 code without the need for multiple insulation systems or additional air-sealing measures.

"The 2026 energy code represents a fundamental shift in how residential insulation must perform," said a Sprayman spokesperson. "Property owners need solutions that not only provide excellent thermal resistance but also create the airtight building envelope that inspectors now require. Our DIY spray foam insulation kits give homeowners and contractors the tools to meet these standards efficiently and document their compliance properly."

As part of the Compliance Initiative, Sprayman has developed updated technical data sheets and specialized Compliance Kits that help users document their insulation's performance for building inspectors. These resources include detailed application guidelines, coverage calculations, and performance verification protocols that align with the 2026 IECC testing procedures. The documentation support addresses a critical need for DIY installers who must demonstrate code compliance during inspection processes.

The impact of the 2026 standards extends beyond energy savings to affect property values and marketability. Homes that fail to meet current energy codes may face challenges during sales transactions, refinancing, or insurance assessments. Meeting these standards has become essential for maintaining property value and ensuring legal compliance during home improvements or new construction projects.

Sprayman has expanded its educational resources to support the initiative, providing detailed guidance through multiple channels including Sprayman on Facebook, where the company shares installation tips, code updates, and project examples. The social media presence complements the company's technical support offerings, creating a comprehensive resource network for DIY installers navigating the new regulatory landscape.

Based in Chantilly, Virginia, and managed by Lotus Global Trade LLC, Sprayman specializes in thermal and sound insulation spray foam products. The company offers a complete range of spray foam insulation solutions, foam sealants, application equipment, and specialty products designed for various surfaces including drywall, plywood, brick, metal, and concrete. The company's product line includes professional-grade spray foam systems that meet or exceed current building code requirements while remaining accessible to DIY users.
