

Go Industries Inc Expands Brush Guards Line with Advanced Winch Integration Systems

April 06, 2026

Richardson, TX - April 06, 2026 -
Go Industries Inc, a Texas-based manufacturer of heavy-duty truck accessories, has expanded its commercial-grade winch grille guard product line to address increasing demand from fleet operators and off-road enthusiasts across North America. The expansion introduces enhanced modular design features that provide increased flexibility for various commercial and off-road applications.

The expanded product line features modular-style grille guards that serve as a foundation for adding winch carriers and brush guards. This integration capability allows commercial fleet operators to standardize base protection across their vehicles while customizing individual units for specific operational requirements. The system accommodates both 9.5 and 16.5 winch carriers, providing versatility for different winching requirements across various vehicle applications.

"The modular design philosophy behind our expanded winch grille guard system reflects the evolving needs of commercial operators who require adaptable protection solutions," said a Go Industries spokesperson.

"Fleet managers can now start with a base system and add components as their operational requirements grow, reducing inventory complexity while maintaining standardized protection across their vehicles."

The winch grille guard system is constructed from 5/16-inch laser-cut steel uprights paired with 2.5-inch 16-gauge steel cross tubes, offering robust protection against road debris and obstacles encountered in commercial operations. The design incorporates custom, heavy-duty mounting brackets engineered for maximum strength and simplified installation, reducing downtime for fleet operators.

A key feature of the expanded commercial line is the optional brushguard addition, which complements vehicle lines while creating additional protection for the headlight area from road debris and off-road brush. This modular capability enables operators to tailor their protection systems to specific operational requirements and environmental conditions.

The expansion aligns with industry trends toward more adaptable vehicle protection systems. Commercial fleet operators face diverse operational challenges, from highway transportation to off-road construction sites, requiring protection systems that can be configured for specific tasks without replacing entire units.

All components in the expanded winch grille guard system are manufactured in the United States and backed by a three-year warranty covering materials, workmanship, and finish quality. The products are available for a wide range of truck makes and models, with customization options including color selection and component configuration.

Go Industries Inc has been manufacturing heavy-duty truck accessories in the United States since 1978. The company specializes in front and back-end protection systems, including grille guards, bumper replacements, headache racks, and specialized equipment for law enforcement vehicles. All products are manufactured at the company's Texas facilities, where strict quality control standards are maintained throughout the production process. The company holds Platinum Status with SEMA, recognizing its commitment to product quality and service excellence in the automotive aftermarket industry.
