

**PET STOP** 

## **AnDi's Pet Perimeters Highlights Underground Electric Dog Fence Installations for Minnesota Properties**

*March 30, 2026*

Eleftherio - Kordelio Municipal Unit, Central Macedonia - March 30, 2026 - PRESSADVANTAGE -

AnDi's Pet Perimeters continues to provide underground electric dog fence installations across central and west central Minnesota. The company focuses on Pet Stop's Smart Link WIFI & Bluetooth-enabled system, which includes diagnostic technology for system setup and monitoring.

The installation process begins with determining the appropriate loop configuration based on the property layout. Options include a perimeter loop that encloses the entire property boundary, an hourglass loop that separates front and back yards, and a double loop that designates specific sections. A signal wire is buried along the chosen path and connected to a transmitter. The dog's receiver collar picks up the signal near the boundary, issuing an audible warning followed by a mild static correction if the boundary is crossed. Correction levels are adjusted according to the dog's size, temperament, and breed. Temporary flags are placed along the boundary during initial setup to aid visual association for the pet.

While some pet owners consider alternatives such as the wireless dog fence, AnDi's Pet Perimeters specializes in buried wire systems that offer defined containment for properties of varying sizes. The approach requires professional placement of the wire to ensure consistent signal performance across the

designated area.

The GentleSteps training program accompanies each installation. Certified trainers conduct on-site sessions over one to two weeks, emphasizing positive reinforcement through praise and rewards. Corrective measures remain limited and are applied only as needed. Phone support follows the initial training period to address any ongoing questions from owners. This structured method helps dogs learn boundaries while associating the designated area with positive experiences.

The receiver collars in this system are lightweight, weighing just 0.9 ounces, making them comfortable for extended wear. Equipped with rechargeable batteries, they can last up to three weeks on a single charge?ideal for active pets. Constructed to be waterproof, these collars are durable and can be used in various weather conditions. Additionally, they come in multiple sizes, ensuring a secure fit for dogs of all breeds, enhancing both safety and comfort during training sessions.

You can easily adjust settings through a user-friendly mobile application that connects via Bluetooth and Wi-Fi. This feature allows you to customize the collar's functionality to suit your pet's needs. Additionally, the probes on the collars are thoughtfully designed for comfort, ensuring your pet feels at ease while wearing them. Overall, these collars combine practicality with ease of use, making them a great choice for pet owners.

Warranties accompany the installations, with coverage extending from two years on standard components to lifetime options on select parts, including the boundary wire and receiver collars. Repair services address issues with existing underground systems, utilizing the diagnostic features of the Smart Link technology to locate and resolve faults.

Andrew Olson, Owner of AnDi's Pet Perimeters, stated, "Professional installation ensures the boundary wire follows the intended path accurately, which supports consistent system operation over time."

Olson continued, "The combination of on-site training and follow-up support allows dogs and owners to adapt to the containment system effectively within the property's specific layout."

The company operates in several communities, including Alexandria, Glenwood, Morris, Sauk Centre, St. Cloud, and Willmar. Service extends to Douglas County, Grant County, Kandiyohi County, Ottertail County, Pope County, and Stearns County.

AnDi's Pet Perimeters provides underground dog fence installation, humane training programs, and repair services for pet containment systems in central and west central Minnesota.
