

Overdenture

The economy of a denture, plus the bone-health supporting strength of dental implants

Chicago Dental Clinic Publishes New Blog Post On Affordable Tooth Replacement Options

April 14, 2016

April 14, 2016 - PRESSADVANTAGE -

1st Family Dental, a dental practice located in Chicago, Illinois, has announced the publication of its newest blog post and infographic. The post gives details explaining affordable tooth replacement options for patients.

Vicky Khawaja, a spokesperson for the clinic states, "The objective behind all of our blog posts is to provide readers with information and answers about a variety of dental health topics in a way that's clear, interesting, honest, and realistic. We also want our blogs to be practical and useful, and we hope our latest post about tooth replacement options can help people to weigh the pros and cons of each option, and make a confident decision that works best for them. "

The post gives insights into the various methods used to replace missing teeth, and offers an explanation of these options including the best scenarios for each. Khawaja states that many patients believe that dentures are the only way to replace missing teeth, and reiterates that this is simply not the case.

"As you can read in our post," Khawaja states, "there are a number of affordable tooth replacement options, some of them much more permanent than dentures."

The post gives an explanation of single dental implants, dental bridges, and partial or full dentures in addition to overdentures, which are full or partial dentures that are placed over implants. This option combines implants and dentures and implants are normally placed two or more at a time. The dental clinic states that this is a preferred option for many denture wearers because they can choose to have permanent implants placed over time, and still wear dentures while they are healing. Once all implants are in place, the denture clips on to the implant for a more permanent solution. The clinic states that this is a more natural way to wear dentures, and that they can still be removed at night for cleaning, but they are more secure than traditional dentures that require paste or glue to hold them in place.

1st Family Dental offers a number of dental implant options and provides consumer information regarding all of the treatments and services that they offer via their blog. The clinic urges patients to keep up to date on the latest procedures by following their blog, and to contact them or visit their official website to learn more or to schedule an appointment.
