

Jeremy L Shelton of SafeAir Certified Mold Inspection Inc Earns CIEC Certification and Advances Indoor Environmental Standards in Atlanta GA

April 01, 2026

April 01, 2026 - PRESSADVANTAGE -

Jeremy L Shelton of SafeAir Certified Mold Inspection Inc has earned the council certified indoor environmental consultant certification from the American Council for Accredited Certification. This certification confirms his knowledge and field experience in indoor environmental investigation and consulting. The achievement also reflects current work in the Atlanta GA region where demand for accurate mold inspection and indoor air quality evaluation continues to grow.

The CIEC certification requires each applicant to pass a formal exam based on established industry texts. The process also requires proof of field experience. Shelton submitted documented work history for review by a board of certified peers. The board issued a unanimous approval after reviewing his qualifications. This process confirms both technical knowledge and applied experience in real inspection settings.

Indoor environmental consultants study indoor air quality conditions and identify sources of contamination

such as mold growth moisture intrusion and ventilation issues. In cities like Atlanta GA changing weather patterns and high humidity levels can increase the risk of indoor mold development. Buildings that experience water intrusion or poor airflow can develop conditions that support mold growth. These conditions can affect both residential and commercial properties.

SafeAir Certified Mold Inspection Inc provides inspection and testing services that focus on data collection and analysis. The company uses tools such as moisture meters air sampling devices and surface testing methods to identify environmental conditions. The goal is to provide clear findings that property owners and professionals can use to make informed decisions. The work does not involve remediation but focuses on assessment and reporting.

The American Council for Accredited Certification sets standards for professionals in indoor environmental disciplines. The organization operates under guidelines that support testing validation and ethical practice. The CIEC certification is accredited by the Council of Engineering and Scientific Specialty Boards. This accreditation confirms that the certification meets national standards for professional credentialing.

Shelton will maintain his certification by completing forty hours of professional development within two years. This requirement ensures that certified professionals remain informed about current practices and research. Continuing education may include training in building science indoor air quality analysis and changes in environmental standards.

SafeAir Certified Mold Inspection Inc serves clients in Marietta and the greater Atlanta GA area. The region includes a mix of older homes new construction and commercial buildings. Each structure type can present different indoor environmental conditions. Older homes may have past water damage or outdated ventilation systems. New construction may face issues related to trapped moisture or rapid building timelines. Accurate inspection helps identify these issues early.

Alex Laldin marketing director at SafeAir Certified Mold Inspection Inc commented on the certification and its impact. He said this certification confirms that Jeremy Shelton meets a high standard for indoor environmental consulting. He added that clients in Atlanta GA rely on accurate data when they face concerns about mold or indoor air quality. He said this achievement supports that need by strengthening the technical foundation behind each inspection.

The role of a certified consultant includes reviewing building conditions collecting samples and interpreting laboratory results. Consultants also provide reports that explain findings in clear terms. These reports often guide next steps such as further investigation or remediation planning by other professionals. Clear reporting helps reduce confusion and supports better decision making for property owners.

In Atlanta GA seasonal weather patterns can influence indoor conditions. Warm temperatures and frequent rain can create moisture problems if buildings do not manage water correctly. Roof leaks plumbing issues and poor drainage can all lead to hidden moisture. Over time this moisture can support mold growth inside walls ceilings or flooring systems. Early inspection helps detect these conditions before they become larger problems.

Laldin also addressed the importance of consistent standards in the field. He said certification through ACAC provides a clear benchmark for knowledge and experience. He said that clients benefit when inspectors follow recognized methods and maintain accountability through ongoing education. He stated that this approach supports trust and improves the quality of information that clients receive.

The ACAC certificant database lists Shelton along with other certified professionals worldwide. This database allows users to search by name company or location. The listing confirms active certification status and helps connect clients with qualified consultants. The database updates regularly to reflect current credentials.

SafeAir Certified Mold Inspection Inc continues to focus on inspection services that provide objective findings. The company works with homeowners property managers and real estate professionals. Each inspection follows a structured process that includes site evaluation sampling when needed and detailed reporting. This process helps ensure that results remain consistent and useful.

The certification of Shelton represents a step forward in maintaining professional standards within the Atlanta GA indoor environmental field. As buildings age and environmental conditions change the need for accurate inspection remains steady. Certified professionals play a key role in identifying issues and supporting safe indoor environments.

Laldin added that the company will continue to support training and certification for its team. He said that ongoing education helps maintain quality across all services. He stated that the company values clear communication and reliable data in every inspection. He concluded that Shelton certification reflects both individual effort and a commitment to professional standards.

The recognition from ACAC confirms Shelton position as a qualified indoor environmental consultant. The certification also supports SafeAir Certified Mold Inspection Inc in its role as an inspection provider in Marietta and Atlanta GA. The company will continue to provide inspection services that focus on accuracy clarity and consistent methods.
