

Apex Custom Concrete Announces New Precision Stamped Concrete Solutions for Residential Patios and Outdoor Spaces

April 06, 2026

April 06, 2026 -

Apex Custom Concrete has announced the expanded availability of its precision-stamped concrete patio design and installation services for residential clients across Northwest Ohio. The company said the expansion extends its service reach to additional communities in the surrounding region, supported by an increased crew capacity dedicated to decorative concrete placement.

Apex Custom Concrete, a stamped concrete company specializing in decorative patio design, applies patterning and texturing during placement to create an embossed surface engineered to replicate the appearance of premium materials such as slate, flagstone, brick, and wood grain. The process incorporates integral color and UV-stable release agents to produce multi-tonal, fade-resistant finishes, with protective sealers applied upon completion to guard against UV exposure, heavy rain, harsh winter conditions, and staining from common outdoor sources such as leaf tannins and incidental spills.

Because the system is poured as a single continuous slab rather than assembled from individual units, it eliminates the inter-unit gaps associated with paver or stone assemblies ? gaps that can allow weed and grass growth over time and increase maintenance labor for property owners. The continuous slab construction also removes the potential for individual unit displacement due to ground movement or freeze-thaw cycling, a relevant structural consideration in Northwest Ohio's seasonal climate.

According to the National Association of Realtors' 2023 Remodeling Impact Report, standard lawn and landscape improvements yield an estimated 83% cost recovery at resale, with hardscape projects among the exterior upgrades most frequently cited by real estate professionals as influencing buyer perception. Decorative concrete surfaces, including stamped installations, are recognized within the residential construction industry as a cost-comparable alternative to natural stone and hand-laid brick masonry at a generally lower installed cost per square foot ? a figure that varies based on pattern complexity, site conditions, and regional labor rates.

Apex Custom Concrete said its stamped patio installations are coordinated across pattern selection, color direction, and surface texture to align with intended use cases, including high-traffic walkways, outdoor gathering areas, and pool-adjacent surfaces. The company noted that specialized texturing applied during the stamping process produces a slip-resistant finish, making it a practical choice for pool decks and areas where traction is a priority.

The company emphasized that the imprinting stage of a stamped concrete project requires precise timing relative to the concrete's cure progression. Impressions must be made within a specific window to achieve consistent depth and clean pattern definition across the full slab. Apex Custom Concrete employs technicians trained in the timing and sequencing requirements of decorative concrete placement, which the company identifies as a primary factor in achieving consistent surface definition across finished slabs.

Installation timelines for stamped concrete patios are generally shorter than those for complex natural stone masonry, where individual units are set one at a time. Project duration varies based on slab size, pattern complexity, and site conditions, though the reduced disruption period is a factor property owners commonly weigh alongside visual and structural goals.

"Our work on each project is focused on meeting the design and performance expectations the homeowner sets out at the start," said Mark Baumgartner, Owner of Apex Custom Concrete. "Stamped concrete gives us the flexibility to address both the visual and structural goals of an outdoor space within a single poured surface."

Apex Custom Concrete provides stamped patio installations as part of a broader hardscape and masonry service portfolio that includes paver patios, engraved concrete, and custom outdoor concrete surfaces. The

company serves residential clients from its Oak Harbor location across the surrounding Northwest Ohio region.

Homeowners may review pattern, texture, and color options through the company's online resources. Project consultations are available to assess site conditions, define scope, align design direction, and establish scheduling. For more information, visit apexcustomconcrete.com or the company's stamped patios service page.

About Apex Custom Concrete

Apex Custom Concrete provides custom concrete and masonry services for residential outdoor spaces, including decorative concrete patio construction and related hardscape work. The company is based in Oak Harbor, Ohio and serves homeowners across Northwest Ohio communities.
