

Go Industries Expands Custom OEM Manufacturing and Fabrication Capabilities for Technology Infrastructure

April 13, 2026

Richardson, TX - April 13, 2026 -
Go Industries has announced the expansion of its custom manufacturing and fabrication services to meet growing demand from technology infrastructure sectors, including specialized production capabilities for AI data center equipment. The Texas-based manufacturer has enhanced its operations with precision manufacturing technologies and expanded service offerings across multiple industrial sectors.

The expansion addresses increased requirements from original equipment manufacturers across automotive, telecommunications, medical equipment, defense, and emerging technology infrastructure markets. The company's enhanced capabilities now include precision manufacturing for data center racks, expanded tube processing services, and advanced sheet metal operations.

"The demand for specialized fabrication services has grown significantly across technology and industrial sectors," said a Go Industries spokesperson. "Our expanded capabilities enable us to serve partners

requiring precision manufacturing for critical infrastructure components, from telecommunications equipment to AI data center server racks."

The enhanced service portfolio encompasses comprehensive tube processing capabilities including CNC bending, rolling, end forming, and sawing. Sheet metal operations have been expanded to include bending, shearing, notching, punching, robotic welding, laser cutting, and plasma cutting. Additional services include certified welding to D1.1, B31.1, and B31.3 standards, chrome plating, powder coating, pipe profiling, and complete assembly and packaging solutions.

Go Industries OEM manufacturing operations take place at the company's Texas facilities, utilizing state-of-the-art equipment including a high-capacity powder coating line and batch oven for product finishing. The extensive inventory of tooling and machinery enables cost-effective solutions across varying production volumes.

The company serves diverse industrial sectors including automotive manufacturers, cable and wire producers, commercial equipment manufacturers, emergency equipment providers, defense contractors, Department of Transportation suppliers, gas and oil companies, medical equipment producers, public safety divisions, sports and fitness equipment manufacturers, transportation safety equipment suppliers, and telecommunications companies.

Design and engineering support services assist OEM partners in optimizing products for manufacturability. Private label programs enable businesses to develop branded products without investing in manufacturing infrastructure, with support from initial design through final delivery.

"Our four decades of manufacturing experience position us to support partners across diverse markets," noted a company representative. "From prototype development through full-scale production, we provide comprehensive fabrication solutions that meet exact specifications."

All engineering and production processes occur at Go Industries facilities in Texas, ensuring quality control and rapid delivery to North American markets. The company maintains advanced manufacturing technologies to provide precision solutions for varying order volumes and complexity levels.

Established in 1978, Go Industries holds Platinum Status with SEMA and operates as a division of Longhorn Reels. The company originally manufactured truck accessories and law enforcement equipment before expanding into custom OEM manufacturing services. With over 40 years of manufacturing experience, Go Industries provides engineering and fabrication services from its Texas-based facilities, serving original

equipment manufacturers throughout North America.
