Federal Steel Systems Marks 16 Years of Transparent Steel Building Solutions

April 08, 2026

ENGLEWOOD, CO - April 08, 2026 -
Federal Steel Systems, a steel building manufacturer and supplier operating out of Englewood, Colorado, has reached its 16th year of continuous operation, marking a significant milestone for a company that has built its market position on a foundation of straightforward pricing and complete, all-inclusive engineered building packages. The anniversary arrives as the company continues to serve clients across commercial, industrial, agricultural, aviation, residential, and self-storage building categories throughout the United States.

Federal Steel Systems entered the steel building market with a deliberate positioning against what its founders identified as a persistent industry problem: the practice of presenting incomplete or artificially low initial pricing, only to introduce significant additional costs during the project process. The company's business model has been structured from its founding around the principle that the purchase order amount a client signs is the amount the client pays, with no undisclosed additions introduced after the agreement is executed. That commitment has defined both the company's client relationships and its reputation in a sector where post-sale cost escalation has historically been a common source of customer frustration.

Over 16 years of operation, Federal Steel Systems has developed what it describes as a long-term supplier

model rather than a transactional one. The company's stated objective is to serve clients across multiple projects over time, a goal that creates a structural incentive to maintain the kind of transparency and delivery performance that generates repeat engagement. The firm's sales and support staff remain available to clients before, during, and after the building delivery process to provide a continuity of service that the company identifies as a meaningful differentiator in an industry where post-delivery support is inconsistently provided.

"Sixteen years in this industry is a reflection of doing things the right way, consistently," said Zack Turner, Sales Representative at Federal Steel Systems. "Our clients know what they are going to pay, they know what they are going to receive, and they know we will still answer the phone after the building arrives. That has not changed since we started, and it is what keeps clients coming back."

Federal Steel Systems' building packages include stamped engineering drawings prepared for permit submission, a component that holds particular value for clients navigating local building departments, which require permit-ready documentation as a condition of project approval. The company's engineering process accounts for local code requirements including snow load capacity and seismic design parameters, ensuring that buildings delivered to clients in varied geographic environments are code-compliant for their specific installation location. This engineering-first approach distinguishes Federal Steel Systems' packages from skeleton kit offerings that transfer the engineering burden to the buyer.

The company serves clients across eight primary building categories: commercial, industrial, agricultural, aviation, self-storage, large clear-span, religious, and residential, including barndominiums and metal homes. Each category presents distinct structural and functional requirements, and Federal Steel Systems works through a detailed specification process with each client to avoid the over-engineering that can inflate project costs without delivering corresponding value. The company's team applies its combined industry experience to help clients arrive at a building specification that meets their operational needs, satisfies applicable codes, and fits their project budget.

As Federal Steel Systems enters its 17th year of operation, the company continues to accept new project inquiries across all building categories. The company's team has stated that initial estimates are provided based on the client's stated specifications without pressure to add unnecessary components, consistent with the business philosophy that has guided the firm's operations across 16 years of continuous service.

Clients seeking a steel building estimate or project consultation can contact the Federal Steel Systems team at 720-475-1354 or visit federalsteelsystems.com to submit a project inquiry.
