

Nimbus Ground Effects Provides Residential and Commercial Ground-Level Fog System Installation in Argyle, Texas

April 17, 2026

ARGYLE, TX - April 17, 2026 - PRESSADVANTAGE -

Nimbus Ground Effects, a specialty contractor located in Argyle, Texas, designs and installs permanent ground-level fog systems for residential properties, commercial venues, and events across the Dallas-Fort Worth metroplex. The company, founded in 2019 by mechanical systems engineer Marcus Bellweather, operates from 317 Frenchtown Road in Argyle and serves homeowners, event venue operators, and commercial property managers throughout Denton, Collin, Tarrant, and Dallas counties. A detailed overview of the company's fog system installation and maintenance services is available on its website, nimbusgroundeffects.com.

Ground-level fog systems are a category of permanent outdoor installation in which a buried manifold network and chiller unit produce a dense, low-lying fog layer that rolls across a landscape. Unlike portable fog machines used in stage production and DJ events, the systems installed by Nimbus Ground Effects are built into the property with concealed lines, hidden nozzles, and a compact control unit designed to remain out of sight. The fog stays close to the ground rather than rising, producing an effect that resembles natural morning mist across the outdoor space. Nimbus Ground Effects is not a fog machine retailer and does not sell

portable fog equipment. The company exclusively designs, installs, and maintains permanent and temporary ground-level fog systems for outdoor properties.

Residential fog system installation from Nimbus Ground Effects is available to homeowners in Argyle, Denton, Flower Mound, Highland Village, Keller, Southlake, Trophy Club, and surrounding communities in the northern Dallas-Fort Worth area. The company offers both standard and premium residential system configurations, with premium systems featuring multi-zone control, LED ground lighting, and smart home integration compatible with iOS, Android, Amazon Alexa, and Google Home platforms. Commercial fog system installation and event fog rental services from Nimbus Ground Effects are available to venues and properties throughout the broader DFW metroplex, including Tarrant County, Dallas County, and western Kaufman County. Commercial offerings include single-event rentals with on-site technician support, seasonal fog packages for venues operating spring through fall, and permanent built-in commercial installations.

Nimbus Ground Effects also provides annual maintenance plans and on-demand calibration services for existing fog system installations across the Dallas-Fort Worth service area. Maintenance clients receive scheduled service visits to inspect manifold integrity, test chiller and pump performance, verify nozzle output, and confirm control system operation. Calibration services address fog depth, density, and coverage adjustments for residential and commercial systems in the DFW area. Each fog system installation from Nimbus Ground Effects begins with a site assessment conducted at the property by a company technician, who evaluates the space and develops a custom system layout before any work is scheduled.

"I spent years building atmospheric fog systems for theme parks and public gardens before starting Nimbus in 2019," said Marcus Bellweather, Founder of Nimbus Ground Effects in Argyle, Texas. "The engineering behind a residential fog system is the same discipline I used on large-scale installations ? fluid dynamics, chiller design, manifold layout ? just applied at a different scale. The DFW market has a combination of outdoor living culture and climate conditions that makes ground fog a practical addition to residential and commercial properties. Every property is different, and every system we design starts with the site conditions on the ground."

Bellweather's background includes designing fog and atmospheric effects systems for major entertainment venues and public garden installations prior to founding Nimbus Ground Effects in Argyle in 2019. The company's field technicians hold EPA Section 608 Certification for refrigerant handling and OSHA safety certification. Nimbus Ground Effects maintains professional memberships in the National Association of Landscape Professionals, the Texas Nursery and Landscape Association, and the Denton County Contractors Association. The company carries \$2 million in general liability coverage and maintains current insurance documentation on file for commercial venue clients that require certificate of insurance verification.

Nimbus Ground Effects is located at 317 Frenchtown Road, Argyle, TX 76226, and provides ground-level fog

system installation and maintenance services to residential and commercial clients throughout the Dallas-Fort Worth metroplex. The company's service area encompasses communities in Denton, Collin, Tarrant, Dallas, and western Kaufman counties. Residential fog system installation clients in Argyle, Denton, Flower Mound, Corinth, Lantana, Frisco, Prosper, Celina, McKinney, Allen, Plano, Grapevine, Colleyville, and Southlake fall within the company's primary service territory. Commercial and event fog installation from Nimbus Ground Effects is available across the full DFW metroplex.
