

Encore Data Products Expands Inventory of Budget-Friendly Disposable Headphones to Help Schools Prepare for Spring Standardized Testing

April 22, 2026

LAFAYETTE, CO - April 22, 2026 - PRESSADVANTAGE -

Encore Data Products, a leading provider of audio and technology solutions for schools, today announced increased availability of low cost headphones and earbuds starting at under two dollars per unit to help schools get ready for upcoming testing seasons. The Colorado-based company has boosted inventory of these affordable audio solutions to help districts manage tight budgets and ensure every student has access to reliable audio equipment for computer-based testing.

As schools across the country prepare for spring testing, administrators face the challenge of equipping hundreds or thousands of students with individual audio devices that meet testing requirements. Many districts must balance strict budget constraints with the need to provide reliable equipment that works throughout testing periods. Encore Data Products has responded to this demand by prioritizing the availability of low-cost disposable headphones designed for large-scale testing environments.

“Schools are under pressure to provide testing equipment for every student and audio devices are required for many computer-based tests,” said a spokesperson for Encore Data Products. “By increasing inventory of affordable headphones we help schools prepare with confidence and protect their technology budgets.”

Disposable headphones and earbuds have become a practical solution for testing environments where single-use or limited-use equipment is preferred for hygiene, convenience and operational efficiency. Each unit meets the basic audio requirements for testing platforms and is durable enough to perform throughout extended testing sessions. With affordable options available, schools can maintain adequate supply levels and replace units quickly if needed without breaking the bank.

Many school districts have moved to computer-based testing formats that require audio for instructions, language assessments, accessibility accommodations and multimedia components. This shift has increased demand for cost-effective audio solutions that can be deployed quickly and consistently across classrooms, computer labs and testing centers. By having ready-to-ship inventory of disposable headphones priced for high-volume purchasing, Encore Data Products makes procurement planning easier for school tech teams and administrators.

The company’s inventory increase coincides with the typical testing preparation timeline when schools finalize equipment orders several months in advance to be ready and avoid last-minute shortages. Having reliable supply availability can be critical in helping districts meet testing deadlines and keep testing smooth.

“We know every dollar counts in education and schools shouldn’t have to choose between testing equipment and other instructional priorities,” the spokesperson added. “Our goal is to make audio solutions available so administrators can focus on preparing students for success rather than worrying about equipment availability.” In addition to testing, disposable headphones are used in many educational settings including language learning labs, media centers, computer classes and temporary programs such as summer school or after-school enrichment. Their single-use design also supports ongoing hygiene considerations and reduces the time required to clean and sanitize shared equipment between users.

Encore Data Products supplies audio equipment, AV technology and classroom accessories to schools, libraries, businesses and government organizations across the US from its headquarters in Lafayette, Colorado. The company offers a broad range of reliable solutions to support learning, communication and technology integration in today’s classrooms, testing programs and administrative offices. With a focus on affordability, reliability and customer service, Encore Data Products helps institutions prepare for their evolving technology needs across classrooms, testing and administrative areas.
