

HRT Mobile Welding Expands Certified Welding Services Across San Francisco Bay Area

April 23, 2026

LIVERMORE, CA - April 23, 2026 -
HRT Mobile Welding has expanded its operational capacity to serve commercial and industrial clients throughout the San Francisco Bay Area, deploying two fully-equipped mobile welding trucks and enhanced in-shop fabrication capabilities from its Livermore headquarters. The expansion addresses growing demand for immediate, on-site welding solutions across construction, maritime, and infrastructure sectors in the region.

The company's certified welding services now reach from Oakland to San Jose, encompassing the entire Tri-Valley region and extending to critical infrastructure projects at ports, data centers, and municipal facilities. With C-60 contractor licensing and American Welding Society certification, the company has positioned itself to handle complex industrial welding projects that require both technical expertise and regulatory compliance.

"The expansion of our mobile welding capacity reflects the increasing need for specialized welding services

that can be delivered directly to job sites without disrupting operations," said Kyle Shannon, founder of HRT Mobile Welding. "Our clients in the construction and maritime sectors require immediate response capabilities, particularly for emergency repairs and time-sensitive infrastructure projects. This expanded reach ensures we can dispatch our mobile units anywhere in the Bay Area within hours."

The company's mobile welding trucks carry comprehensive equipment for MIG, TIG, and stick welding processes, enabling technicians to perform structural steel repairs, precision pipe welding, and custom metal fabrication at any location. This capability proves particularly valuable for facilities with large, permanently installed equipment that cannot be transported for repairs, as well as for contractors working on multi-site infrastructure projects.

Recent projects demonstrating the company's expanded capabilities include structural repairs at the Port of Oakland, critical stainless steel pipe welding for data center infrastructure, and ongoing fleet maintenance for national equipment rental companies. The company maintains a four-hour industrial minimum service standard, ensuring readiness for both emergency response and scheduled maintenance work.

"Industrial and commercial clients need welding partners who understand the complexities of working in controlled environments, meeting strict safety protocols, and delivering work that meets certification standards," added Shannon. "Our expansion allows us to bring that expertise directly to project sites, whether it's a maritime facility requiring immediate structural repairs or a data center needing precision pipe welding."

The expansion comes as California's industrial and commercial sectors experience increased demand for mobile trade services, driven by infrastructure development and the need to maintain aging equipment and facilities. The company's mobile service model eliminates transportation logistics and reduces equipment downtime, critical factors for businesses operating on tight production schedules.

HRT Mobile Welding specializes in serving construction and general contractors, industrial equipment rental fleets, maritime and port facilities, data center and infrastructure contractors, and municipal and government projects. Founded in October 2024 after Shannon completed a decade-long apprenticeship with a master mobile welding contractor, the company operates from its Livermore facility while maintaining the mobility to serve clients across the greater Bay Area, including Oakland, San Jose, San Francisco, Fremont, Hayward, Concord, Walnut Creek, Pleasanton, Dublin, Tracy, Stockton, and surrounding communities.
