Credence Chiropractic in Williamson County, TX, Highlights Expertise of Dr. Chris Hill and Kate Hill

April 17, 2026

GEORGETOWN, TX - April 17, 2026 -
Credence Chiropractic in Williamson County, TX, highlights the professional backgrounds and personal experiences of its co-founders Dr. Chris Hill and Kate Hill as part of its established operations in family chiropractic care. The practice, which opened in 2017 in Georgetown, Texas, maintains a focus on neurologically based methods for patients of various ages. Information drawn from the practice website describes the educational and experiential foundations that have guided service delivery since the opening.

Dr. Chris Hill completed his education at Logan University and obtained advanced training in pregnancy and pediatrics. He serves as a founder of the practice and has participated in family chiropractic services with an emphasis on pediatric cases. His background includes observations from personal family situations that influenced his approach to care timing. For example, following an adjustment on his oldest son shortly after birth, recorded oxygen levels increased sufficiently to avoid a neonatal intensive care unit transfer. Dr. Chris Hill has noted encounters with pediatric patients who presented with challenges at later stages, which informed his perspective on the sequence of health interventions in family settings.

Kate Hill functions as co-founder of Credence Chiropractic and holds certification as a doula. She contributes to prenatal aspects of the practice, assisting with preparation related to pregnancy and the postpartum period. Her involvement originated after she experienced changes in her own health history while Dr. Chris Hill was completing chiropractic school. Kate Hill previously managed frequent headaches, migraines, allergies, sinus infections, and ear infections. Following consistent participation in chiropractic sessions, those specific issues resolved according to her account on the practice site. This sequence of events led her to transition from a previous career and establish the practice with Dr. Chris Hill to extend similar care options within the local community.

The co-founders' combined backgrounds have contributed to the structure of services at Credence Chiropractic in Williamson County, TX. The practice incorporates the Torque Release Technique as one

method for addressing nervous system stress. Neurological chiropractic care forms a central component, with attention to brain-body communication processes. Prenatal chiropractic services include support for the prenatal journey, delivery preparation, and postpartum planning. Pediatric chiropractic care targets optimization of child development and quality of life indicators. Whole family chiropractic care extends these services across age groups under a coordinated framework.

Dr. Chris Hill provided context on pediatric timing in family health management. Dr. Chris Hill, co-founder and chiropractor at Credence Chiropractic, stated, The sooner we can be proactive with our kids health, the healthier they can grow up to be. The statement appears in the team profile on the practice website and reflects his recorded viewpoint on intervention sequencing.

Kate Hill addressed her personal health progression and its relation to practice establishment. Kate Hill, co-founder and certified doula at Credence Chiropractic, noted, Through regular chiropractic care, her body healed its continual headaches, migraines, allergies, sinus infections, and ear infections. Her description on the site connects this outcome to her decision to pursue natural health support for the broader community.

Credence Chiropractic utilizes assessment processes for new patients that incorporate consultations, neurological evaluations, and individualized reviews. The practice has operated with these protocols since its 2017 opening, maintaining consistency in application across prenatal, pediatric, and family services. Advanced technology, including elements referenced in patient evaluation sequences, supports data collection on nervous system indicators during visits. Adjustments remain non-invasive and align with the neurologically oriented framework described in practice materials.

In the period since establishment, the leadership of Dr. Chris Hill and Kate Hill has sustained service delivery to families in the Georgetown area and surrounding Williamson County communities. The practice model integrates Dr. Chris Hill's specialized training in pregnancy and pediatrics with Kate Hill's doula certification to address distinct phases of family health needs. Pediatric services draw from observations of developmental timelines, while prenatal offerings incorporate preparation for physiological transitions. Whole family care coordinates these elements to accommodate multiple generations within single-family units.

The personal accounts documented by the co-founders provide background on the origins of Credence Chiropractic. Dr. Chris Hill's Logan University graduation and subsequent advanced training supplied the clinical foundation for his role. Kate Hill's health history and doula credentials added complementary elements focused on maternal support. These factors converged in 2017 with the practice launch, establishing a location-based service in Georgetown that has continued without interruption.

Further details from the practice indicate that patient visits follow a defined sequence beginning with application processes and office orientation, followed by consultation, assessment, and reporting phases

prior to initial adjustments. This standardized intake supports alignment of care with documented individual histories. The Torque Release Technique, referenced in service descriptions, applies across categories including prenatal and pediatric sessions. Neurological assessments form part of ongoing evaluations to monitor communication pathways between the brain and body systems.

Credence Chiropractic has maintained its operational model through the contributions of its founding team. Dr. Chris Hill's commitment to family wellness and Kate Hill's emphasis on natural healing pathways have remained consistent elements in service provision. The practice continues to serve the Williamson County region with its established neurologically based approach to chiropractic care.

Credence Chiropractic is a chiropractic practice that has provided services to families in Texas since opening in 2017 in Georgetown. The facility offers prenatal chiropractic care, pediatric chiropractic care, whole family chiropractic care, and neurological chiropractic care. Its methods include the Torque Release Technique and related assessment protocols.
