

Mindmachines.com Announces Complete Personal ROSHI Protocols Now Available in Advanced Brainwave Technology

April 30, 2026

Dallas, Texas - April 30, 2026 - PRESSADVANTAGE -

Mindmachines.com announces the availability of comprehensive protocols from the classic pROSHI mind device through its ROSHIwave IN-SIGHT technology, providing clinicians and wellness practitioners with precise emulation of established brainwave disentrainment methods.

The Dallas-based distributor of brainwave entrainment technology has integrated all well-researched classic ROSHI-style protocols into the ROSHIwave IN-SIGHT device, addressing the needs of nearly 100 clinicians worldwide who previously relied on classic ROSHI devices that are no longer in production. The pocket-sized, USB-rechargeable device operates with click-wheel navigation similar to an mp3 player, making advanced brainwave technology more accessible to both practitioners and individual users.

The ROSHIwave IN-SIGHT employs a process called Dynamic Neuro-Activation, which dis-entrains abnormal brainwave frequencies through carefully calibrated photostimulation. This technology sends specific

light patterns through the eyes and into the brain, helping to normalize brainwave patterns and guide users to meditative states typically achieved only through years of dedicated practice.

"The integration of all classic pROSHI protocols represents a significant advancement in making proven brainwave disentrainment technology accessible again," said Fred Williams, spokesperson for Mindmachines.com. "Practitioners who have relied on these specific protocols for their clients can now access them through a modern, portable device that maintains the precise calibrations necessary for effective brainwave normalization."

The device includes both the original ROSHI-style protocols and newly developed multiplexed versions, expanding the range of applications for practitioners working in areas such as peak performance training, stress reduction, meditation enhancement, and cognitive optimization. Each protocol has been carefully calibrated to maintain the specific frequencies and patterns that made the original ROSHI devices effective tools for brainwave entrainment.

The ROSHIwave IN-SIGHT comes equipped with color-changing RGB RoshiGlasses featuring six side-firing LEDs per eye, a color-changing RGB Ganzfeld RoshiVisor, USB charger and cable, and a protective carrying case. The device allows users to experience altered states of consciousness and ganzfeld effects that can facilitate inner peace, accelerated learning, behavior modification, and improved sleep patterns.

Clinicians and wellness practitioners have adopted the technology as a replacement for discontinued classic ROSHI devices, ensuring continuity in their treatment protocols. The device serves professionals in various fields, including biofeedback, neurofeedback, meditation instruction, and performance optimization.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIwave self-meditation device. Based in Dallas, Texas, and operated by Av3X LLC, Mindmachines.com specializes in technologies designed to enhance mental performance, wellness, and personal achievement through advanced brainwave entrainment methods.
