Magic Memories Examines Role of Movement-Based Learning in Early Childhood Development at Jeffersonville Location

April 20, 2026

EAGLEVILLE, PA - April 20, 2026 -

Magic Memories Early Learning Schools integrates movement-based learning into its daily classroom practices at the Jeffersonville location as part of its established approach to early childhood education. This method supports the physical, cognitive, and behavioral growth of young children through consistent participation in guided activities within the center?s nurturing environment. At the Jeffersonville site, educators observe how physical engagement contributes to coordination and body awareness while aligning with broader developmental goals shared across the organization?s Pennsylvania locations.

Early learning environments at Magic Memories emphasize the connection between movement and overall child development. Children in small age-specific groups, ranging from infants in the Fireflies and Turtles classrooms to preschoolers in the Giraffes, Seahorses, and Leopards rooms, experience activities that promote physical skills through natural exploration. The bright, welcoming classrooms provide space for children to move comfortably while interacting with toys and reading materials designed to encourage active participation.

Movement-based learning experiences observed at the Jeffersonville location include music and movement activities that help children practice following directions and engaging in group settings. These everyday classroom interactions build physical coordination as children navigate structured routines that combine rhythm and motion. ?Movement-based learning plays a vital role in helping children develop physical coordination and the ability to participate effectively in group settings,? said Ashley Edmunds, Director at the Jeffersonville location of Magic Memories.

The physical benefits of such activities extend to improved body awareness and motor skill development, which support children as they grow and explore their surroundings. At Jeffersonville, the incorporation of enrichments such as yoga and physical education provides additional opportunities for children to practice balance, flexibility, and teamwork in supportive group formats. These elements complement the center?s focus on creating safe spaces where physical activity occurs alongside cognitive and social learning.

Cognitively, movement-based learning contributes to memory skills and attention span by requiring children to remember sequences and focus during guided sessions. In the Jeffersonville classrooms, educators note that children who engage regularly in these experiences show enhanced capacity to process information and maintain focus on tasks. The approach aligns with the center?s use of personalized lessons through the Learning Beyond Paper curriculum, which tailors activities to each child?s developmental stage.

Behaviorally, participation in group movement experiences fosters self-regulation and cooperation. Children learn to follow structured instructions, which promotes positive classroom dynamics and helps build confidence in social interactions. The Jeffersonville location?s emphasis on transparent relationships between teachers and families reinforces these outcomes, as daily communication highlights progress in behavioral areas tied to active learning.

Additional perspective from the leadership team underscores the observed trends. ?In our experience at Jeffersonville, these activities contribute to improved attention and memory skills as children follow structured instructions through movement,? said Katina Rollins, Assistant Director at the Jeffersonville location of Magic Memories.

Magic Memories further connects movement-based learning with its STEAM-focused elements, where physical exploration intersects with science, technology, engineering, arts, and math concepts. Children at Jeffersonville apply movement in creative ways during experiments and hands-on activities, strengthening both analytical thinking and physical engagement. The center?s small class sizes enable teachers to provide individualized attention, ensuring that each child benefits from the developmental support embedded in these practices.

As a STAR 4 program within the Keystone STARS quality initiative, Magic Memories maintains high

standards in early care and education across its locations, including Jeffersonville. The organization operates with a philosophy centered on building a child?s bright future through experienced staff, personalized attention, and environments that balance structured curriculum with free play. Teachers, many of whom hold credentials in early childhood education, create warm and secure settings that feel like home while promoting growth across physical, cognitive, social, emotional, and academic domains.

The Jeffersonville location exemplifies how ongoing educational practices at Magic Memories weave movement into routine experiences to support comprehensive development. By focusing on these foundational elements, the center contributes to children?s readiness for future learning stages without isolating any single aspect of growth. This consistent integration of movement-based learning remains a core part of the daily classroom life for families served at the site.
