

Warner's Outdoor Solutions Offers Spring Weed Control and Fertilizing Guidance for Twin Cities Properties

April 23, 2026

WOODBURY, MN - April 23, 2026 - PRESSADVANTAGE -

Warner's Outdoor Solutions has shared practical timing guidance for spring weed control and fertilizing to help residential and commercial property owners prepare lawns in the Twin Cities metro area. As April advances, the company recommends beginning fertilizer applications and planning targeted weed treatments to address broadleaf weeds such as dandelions before they reach peak growth in May.

The program combines premium granular fertilizers with selective post-emergent treatments. These applications promote healthy turf development while controlling established weeds. Fertilizing in early spring supports root growth and greening as temperatures rise. Weed control measures prove most effective once weeds enter active growth, generally when air temperatures range from 60 to 80 degrees Fahrenheit. Property owners achieve stronger lawn performance by addressing nutrient needs and weed pressure in a coordinated sequence during this period.

Dandelions and other broadleaf weeds commonly emerge from winter dormancy throughout April. Intervention in late April through May targets these weeds during their susceptible stage. Treatments focus

on common invaders, including dandelions, clover, and creeping charlie, while preserving desirable grass species. This fertilizer and weed control sequence forms part of a broader seasonal lawn maintenance that continues through the growing season.

Ryan Warner, President of Warner's Outdoor Solutions, stated, "In the Twin Cities, we have to choose materials and timing carefully for spring fertilizing and weed control if we want the lawn to perform well through the season."

He added, "Starting fertilizer applications now and following with targeted treatments for dandelions by May helps deliver reliable results for both residential and commercial properties across the metro area."

Warner's Outdoor Solutions tailors its fertilization and weed control packages to individual property conditions. Premium granular fertilizers release nutrients gradually to sustain grass vigor over time. Targeted herbicide applications manage visible weeds with minimal effect on surrounding turf. The service connects with additional lawn care offerings such as mowing, core aeration, dethatching, and overseeding to support complete lawn health.

For residential properties, these spring steps contribute to uniform, vibrant lawns that improve overall appearance. Commercial properties gain from consistent turf quality and reduced weed presence across larger areas, including office parks, retail locations, and institutional grounds. The company delivers the same level of attention to proper timing and product selection for both market segments, accounting for Minnesota's variable spring weather patterns.

Complementary lawn care elements enhance the spring program. Irrigation system start-up and adjustments provide even water distribution to support newly fertilized areas. Pest monitoring is conducted in tandem with weed management to identify any developing concerns. The integrated seasonal strategy prepares properties for summer conditions and lays the groundwork for subsequent fall maintenance activities.

Warner's Outdoor Solutions operates from its base in Woodbury, Minnesota, and extends services throughout the Twin Cities metro area, including Minneapolis, St. Paul, and surrounding communities. Trained technicians conduct applications in accordance with product label guidelines and local environmental conditions to produce consistent outcomes. The company prides itself on its commitment to sustainability, utilizing eco-friendly products whenever possible.

With a focus on customer satisfaction, Warner's has built a reputation for excellence through reliable service and attention to detail. The company has delivered lawn care, landscaping, and landscaping design and build

services for more than 25 years to residential and commercial properties in the region. They aim to transform outdoor spaces into beautiful, functional areas tailored to the unique needs of each client.
