

fassadenmax GmbH Expands Scaffold-Free Facade Cleaning Services Across Zurich Region

April 29, 2026

NIEDERHASLI, ZH - April 29, 2026 -
fassadenmax GmbH, a specialized facade cleaning company based in Niederhasli, has expanded its innovative scaffold-free cleaning services throughout the Zurich metropolitan area to meet growing demand for sustainable building maintenance solutions. The company, which launched operations in May 2024, utilizes advanced drone and telescopic lance technology to provide professional cleaning services for facades, roofs, and photovoltaic systems without traditional scaffolding requirements.

The expansion comes as property owners across Kanton Zürich increasingly seek alternatives to costly facade renovations. Research indicates that approximately 90 percent of facade contamination consists of biological growth, including algae, fungi, and moss, which can be effectively removed through specialized cleaning methods rather than expensive repainting projects.

The facade cleaning company Zurich residents are turning to employs a systematic approach that begins with a detailed assessment using drone technology. This method allows technicians to evaluate building

conditions and identify problem areas without the time and expense of erecting scaffolding. The cleaning process itself utilizes telescopic lances that can reach heights of up to 20 meters, making it suitable for both residential and commercial properties throughout Niederhasli and surrounding communities.

Building owners in the Zurich area are discovering that regular professional cleaning extends the lifespan of their facades significantly while maintaining aesthetic appeal and structural integrity. The company's three-step process involving pre-treatment, gentle low-pressure rinsing, and application of long-term sealant provides protection that can delay repainting needs by several years.

Beyond traditional facade cleaning Zurich property managers also benefit from the company's specialized photovoltaic system cleaning services. Accumulated dirt and biological growth on solar panels can reduce energy efficiency by up to 30 percent. Regular professional cleaning restores optimal performance levels, directly impacting energy production and return on investment for solar installations.

The company's technology works effectively on diverse building materials, including plaster, fiber cement (Eternit), natural stone, metal, glass, and traditional roof tiles. This versatility makes the service suitable for the varied architectural styles found throughout the Zurich region, from historic structures to contemporary commercial buildings.

The algae removal Zurich service addresses a particularly prevalent issue in the region's climate. The combination of moisture and moderate temperatures creates ideal conditions for biological growth on building surfaces. fassadenmax GmbH's treatment methodology not only removes existing contamination but also applies protective sealants that inhibit future growth, reducing maintenance frequency and associated costs.

Environmental considerations play an increasingly important role in building maintenance decisions. By extending the service life of existing facade materials through professional cleaning, property owners reduce waste generation and resource consumption associated with premature renovation cycles. This approach aligns with Switzerland's broader sustainability objectives while delivering practical economic benefits to building owners.

fassadenmax GmbH operates from its Zurich-area facility at Gewerbestrasse 18 in Niederhasli, serving clients throughout German-speaking Switzerland. The company offers complimentary test area assessments, allowing property owners to evaluate cleaning results before committing to full-scale projects. Interested parties can reach the company at 0840 880 880 or locate them on Google Maps for consultation scheduling.
