

## **Pepin Manufacturing Participated in the 2026 Global Pet Expo**

*April 27, 2026*

LAKE CITY, MN - April 27, 2026 - PRESSADVANTAGE -

Pepin Manufacturing, Inc. participated in the 2026 Global Pet Expo held March 25 through 27 in Orlando, Florida, where the company presented its Lint Busters? product line at booth 6020. The event provided an opportunity for the contract manufacturer to engage with pet industry professionals and showcase products developed through its precision converting and fabrication processes.

The Global Pet Expo is one of the largest annual trade shows serving the pet care sector. Pepin Manufacturing utilized the three-day gathering to demonstrate the performance of its Lint Busters? rollers, which are designed for effective removal of pet hair, lint, dust, and other debris from clothing, furniture, upholstery, and various surfaces. Attendees at booth 6020 observed live demonstrations of the Hair Busters and related lint roller products, including options suited for both consumer and commercial applications.

Lint Busters?, a division of Pepin Manufacturing, produces lint rollers using advanced converting techniques. These include slitting, laminating, precision cutting, and assembly processes that ensure consistent adhesive performance and durability across production volumes. The rollers incorporate specially selected materials such as high-quality adhesives, fabrics, and backings to balance cleaning effectiveness with ease of use.

Products are available for retail, veterinary clinics, clothing manufacturing facilities, industrial settings, and household use.

Production of the Lint Busters® line takes place at Pepin Manufacturing's facility in Lake City, Minnesota. The company maintains control over the entire manufacturing process, from material selection to final assembly and packaging. This integrated approach supports uniform quality and allows for customization to meet specific market requirements.

Steve Yulga, Director of Sales and Marketing for Pepin Manufacturing, stated: "The Global Pet Expo provided an excellent platform to connect with pet industry leaders and showcase the effectiveness of our Lint Busters® solutions."

He added: "Feedback from attendees highlighted the strong performance and practical design of our rollers, reinforcing our commitment to delivering reliable products for everyday and professional use."

Pepin Manufacturing applies its broader expertise in contract converting and fabrication to the development of Lint Busters® products. The company offers services that include rotary die-cutting for high-volume production, flatbed die-cutting for intricate designs, precision cutting for tight tolerances, laminating for multi-layer constructions, slitting, sheeting, and contract assembly services. These capabilities enable the creation of components and finished goods that meet exacting standards across multiple industries.

In addition to consumer-oriented items like lint rollers, Pepin Manufacturing supplies precision-engineered solutions for medical device manufacturing, electrotherapy applications, aerospace, defense, electronics, automotive, and industrial markets. Custom electrodes for therapeutic devices, MarFree urethane solutions for non-marring surface protection, and various adhesive-backed components are produced using the same quality-focused processes.

The company operates an ISO-13485 certified facility, which supports compliance with regulatory requirements in medical and other sensitive sectors. Quality control measures are applied at every stage, from incoming materials to final inspection, to maintain consistency whether producing prototypes, small batches, or large-scale runs.

Pepin Manufacturing, Inc. was established in 1993 as a family-owned business. Its manufacturing heritage extends further through family roots dating back to 1875. The company emphasizes American-made production and long-term client partnerships, focusing on innovation, integrity, quality, and customer service.

Participation in trade shows such as the 2026 Global Pet Expo allows Pepin Manufacturing to interact directly with distributors, retailers, manufacturers, and end users in the pet care sector. These engagements help

gather insights that inform ongoing product refinement and support the expansion of the Lint Busters? division.

The Lint Busters? rollers are engineered to address common challenges in pet hair removal. Their adhesive formulations capture hair and debris effectively while resisting premature wear. Handles and roller designs prioritize user comfort and convenience during extended use in both home and professional environments.

By leveraging its contract converting expertise, Pepin Manufacturing ensures that Lint Busters? products deliver reliable performance. The division started with a focus on practical cleaning solutions and has grown through attention to material science and manufacturing precision.

The company?s presence at the Global Pet Expo also highlighted opportunities for bulk and wholesale supply of lint rollers to commercial and industrial facilities. This aligns with Pepin Manufacturing?s ability to scale production to accommodate varying order sizes and specifications.

As the pet industry continues to evolve, Pepin Manufacturing remains positioned to support related product needs through its converting and assembly capabilities. The company?s experience in handling diverse materials, including foams, films, adhesives, and non-wovens, provides a foundation for developing additional solutions tailored to pet care applications.

Pepin Manufacturing, Inc. is a contract manufacturer specializing in precision converting, fabrication, and assembly services. From its Minnesota facility, the company delivers custom components and finished products for medical, industrial, aerospace, consumer goods, and pet care markets.
