

Tabush Group Expands Managed IT Support for Law Firms to Address Growing Cybersecurity and Compliance Demands

April 29, 2026

NEW YORK, NY - April 29, 2026 -
Tabush Group, a leading cloud and managed IT service provider, announced today the expansion of its specialized IT support services for law firms, addressing the increasing cybersecurity threats and complex compliance requirements facing the legal industry. The enhanced service offerings come as law firms nationwide grapple with sophisticated cyber attacks and evolving regulatory frameworks that demand robust technology infrastructure.

The expansion builds upon Tabush Group's established expertise in providing secure, reliable IT solutions tailored specifically for legal professionals. The company's comprehensive approach combines advanced cloud services, proactive cybersecurity measures, and dedicated support to help law firms maintain client confidentiality while meeting stringent industry regulations.

"Law firms today face unprecedented challenges in protecting sensitive client data while maintaining

operational efficiency," said Morris Tabush, founder of Tabush Group. "Our expanded services address these critical needs by providing enterprise-level security and compliance capabilities that were previously accessible only to the largest firms. We understand that legal professionals need technology partners who comprehend the unique demands of their practice, from maintaining attorney-client privilege to ensuring seamless access to case files from any location."

The enhanced service portfolio includes Tabush Group's Boxtop Cloud Desktop as a Service solution, which enables secure remote access to firm resources, and the Guardian SOCaaS platform, providing continuous monitoring and threat detection. These technologies work in tandem to create multiple layers of protection against ransomware, data breaches, and other cyber threats that increasingly target law firms.

Recent industry reports indicate that 25 percent of law firms experienced a security breach in the past year, with average remediation costs exceeding $1.2 million per incident. The legal sector has become a prime target for cybercriminals due to the valuable financial and personal information firms routinely handle. Tabush Group Managed IT support for law firms addresses these vulnerabilities through comprehensive security assessments, employee training programs, and advanced defensive technologies.

The company's Overture Cloud Management service provides centralized control over firm technology resources, enabling IT administrators to implement consistent security policies across all devices and locations. This unified approach simplifies compliance with regulations such as HIPAA for healthcare-related cases and financial industry requirements for corporate law practices.

Tabush Group also offers its Edge Co-Managed IT Solutions for firms with existing IT departments, providing specialized expertise and tools to complement internal resources. This collaborative approach allows firms to maintain control over their technology infrastructure while benefiting from external expertise in emerging threats and compliance requirements.

Founded in 2000, Tabush Group specializes in cloud computing and managed IT services for professional service firms, with particular expertise in the legal sector. The company serves hundreds of law firms across the United States, ranging from solo practitioners to multi-office practices with hundreds of attorneys. Tabush Group's services include cloud desktop solutions, cybersecurity protection, IT consulting, and 24/7 technical support, all designed to help law firms leverage technology for improved efficiency, security, and client service.
