

Project 2 Payment Introduces Advanced Features in Landscaping Estimate Software for Enhanced Contractor Efficiency

April 29, 2026

ST PAUL PARK, MN - April 29, 2026 -

Project 2 Payment, a comprehensive business management software provider for contractors, has announced significant enhancements to its platform designed to help landscaping professionals streamline their bidding processes and improve profitability. The updated system addresses common challenges faced by landscaping contractors in creating accurate estimates, managing projects, and collecting payments efficiently.

The enhanced platform combines estimate creation, invoicing, and digital payment collection into a single integrated solution, eliminating the need for multiple software tools and reducing administrative overhead for landscaping businesses. These improvements come as the landscaping industry continues to experience steady growth, with contractors seeking more efficient ways to manage increasing project volumes and client expectations.

"Landscaping contractors face unique challenges when preparing estimates, from calculating material costs and labor hours to factoring in seasonal variations and project complexity," said Jay Bruber, founder of Project 2 Payment. "Our enhanced platform addresses these specific needs while maintaining the simplicity that contractors require to focus on their core business rather than administrative tasks."

The Project 2 Payment landscaping estimate software now includes advanced features for tracking project progress, managing payment schedules, and maintaining comprehensive records of all client interactions. These capabilities enable contractors to provide more professional service while reducing the time spent on paperwork and follow-up activities.

Beyond estimate creation, the platform offers integrated invoice generation that automatically pulls data from approved estimates, ensuring consistency and accuracy throughout the billing process. The digital payment collection feature provides secure transaction processing, allowing contractors to receive payments faster and reduce outstanding receivables.

The software serves contractors across multiple industries including electrical, HVAC, plumbing, painting, and masonry services, in addition to landscaping professionals. This broad applicability has helped establish Project 2 Payment as a versatile solution for various contracting businesses seeking to modernize their operations.

Recent industry data indicates that contractors using integrated business management software report average time savings of 30 percent on administrative tasks, allowing them to focus more resources on project execution and customer service. The platform's projects and payments tracking feature provides real-time visibility into business performance, enabling contractors to make informed decisions about resource allocation and business growth strategies.

The company also maintains a comprehensive Business Resource Center and regularly updated blog, providing contractors with valuable insights on industry trends, best practices, and business management strategies. These resources complement the software platform by offering ongoing education and support for contractors at various stages of business development.

New users can explore the platform's capabilities through a complimentary 30-day trial period, allowing them to experience the benefits of integrated estimate creation, invoicing, and payment collection before making a commitment.

Project 2 Payment continues to develop its platform based on contractor feedback and evolving industry

needs, with a focus on simplifying complex business processes while providing the robust functionality required for professional contracting operations. The company's commitment to serving the contracting community has positioned it as a trusted partner for businesses seeking to enhance their operational efficiency and competitive advantage in an increasingly digital marketplace.
